Any Place.

NEC. Japan's leading producer of everything in broadcasting: from studio equipment to TV sets.

NEC. Designing and installing integrated broadcasting systems all over the world. Systems like satellite communications for the INTELSAT global network. Systems like radio-TV broadcasting in Hongkong, Taiwan, Pakistan, Spain, Turkey, Brazil, Mexico, U.S.A. and many others.

NEC. Producing equipment that meets all requirements in the field—from compact transistorized studio equipment, VHF and UHF transmitters and antennas, down to microwave relay facilities. All NEC equipment is easy-to-maintain, has easy access and minimum power consumption. And all NEC equipment meets the highest standards set by international organizations like FCC and CCIR.

Products for today—
Innovations for tomorrow

NEC

Nippon Electric Co., Ltd. Tokyo, Japan

Overseas Offices: Taipei, Manila, Bangkok, Djakarta, Kuala Lumpur, New Delhi, Karachi, Teheran, Melbourne, Brussels, Hamburg, Mexico City, Rio de Janeiro, Bogota, New York, Chicago.

Main Products: electronic computers, data communication systems, telephone systems, carrier transmission radio communication, radio & television broadcasting, satellite communications equipment, electrical household appliances, other applied electronic equipment, and electronic components.

PEACE AND PROGRESS

Radio Station "Peace and Progress" is sponsored by Soviet public organizations. It broadcasts in English, French, Spanish, Portuguese, German, Hebrew, Yiddish, Guarani, Chinese and Mongolian. Programmes are beamed daily to Asia, Australia, Africa, the Near and Middle East, Latin America and Europe.

It is the aim of Radio Station "Peace and Progress" to acquaint its listeners with Soviet public opinion on vital questions, with the point of view of the Soviet people on international events, to inform them of the current events taking place in various countries and to cover the activities of international organizations.

Our address:

Radio Station "Preace and Progress"
Moscow, U.S.S.R.

We establish contacts and sign contracts with foreign broadcasting stations and information agencies to provide them with materials on political questions as well as questions dealing with the public life of our country.

This is RADIO MOSCOW

You can pick up Radio Moscow in 64 languages and dialects of the world and in ten languages spoken in the Soviet Union. We beam programmes to all continents on both short and medium waves.

If you'd like first-hand information about the Soviet Union and the Soviet view of international affairs, don't fail to tune in to Radio Moscow.

1970 will be 100 years since the birth of Vladimir Lenin, a great thinker who organised and led the first victorious socialist revolution in history. Lenin also founded the Soviet Union. Radio Moscow will be acquainting listeners with Lenin's life, activities and theory. Programmes will be featured about how Lenin's ideas regarding the construction of a socialist society are being implemented. They will explain why Lenin's ideas are winning more and more millions of followers the world over.

We welcome comment and quote from listeners' letters on our programmes. At the request of listeners we arrange interviews and panel discussions with statesmen, civic leaders, industrial and farm workers and professionals, both communists and unaffiliated. Listeners are invited to take part in our quizzes. Music at your request — a regular feature.

Tune in to Radio Moscow!

HOW TO USE THE WORLD RADIO TELEVISION HANDBOOK

The World Radio TV Handbook is designed to help the international radio listener obtain maximum enjoyment from his receiver.

The first section of the Handbook contains instructive articles relating to broadcasting, information regarding broadcasting and television organizations, and popular technical articles and tables of practical value to listeners.

The main section of the book (pages 58-272) contains detailed information, by country, of the **Radio Stations** and broadcasting organizations of every country in the world, including names and addresses of broadcasting companies, names and titles of leading officials, lists of broadcasting stations in each country, including frequencies, wavelengths, transmitter power, call signs (if used), and station names. Program information is also listed, including times, frequencies, and beam areas of the broadcasts in each language. The announced **location** of the st, rel. st's exc, is usually the studio and administrative location, since the tr's are often located in outlaying areas — **Power** is stated in kilowatt (kW) or Watt (W). When two powers are listed, the figures represent the lower and upper limits of power, where a station uses more than one tr. on the frequency at different times (sw) or varies the power of the tr. for day and night operation (mw).

A **listing by frequency and wavelength** of the shortwave stations of the world and long and medium wave stations by continents is presented in the last part of the Handbook, for use in facilitating the identification of stations.

Abbreviations: See page 10 for explanation.

Short-wave stations may be used either for domestic broadcasting to listeners in the same country or for international broadcasting directed to listeners in other countries.

International short-wave stations usually employ directional antennas to beam their programs to particular areas on frequencies calculated for best reception. Most international broadcasts are scheduled for the evening hours in the intended reception area, but some are in the morning or at other times during the day. The reception areas give their names to the services: European Service (or to Europe), Far Eastern Service (or to Far East), North American Service (or to North America), etc. Languages employed are those of the listeners in the area to which the broadcast is directed, also the language of the transmitting country for reception by persons understanding that language.

Best reception is usually obtained from transmissions directed to your area. However, there is a considerable amount of overlapping between many service areas and, therefore, it is often possible to obtain good reception of programs beamed to adjacent areas and, sometimes, even of programs directed to distant parts of the world. Shortwave propagation conditions change continually because of the influence of daylight and darkness, seasonal effects and solar activity. Consequently, good reception requires frequency change from time to time.

(See articles: "Radio Broadcast Reception Conditions", "Solar Activity", on the respective pages.)

Domestic short-wave stations are usually of lower power than international stations, and generally use non-directional or wide beam antennas, in order to reach local or national audiences. These stations make fewer seasonal frequency changes, and many operate on the same channel for both day and night operation. The stations are utilized to reach areas of a country where coverage by medium and long wave stations is not adequate.

The geographical Co-ordinates of the transmitter sites are given in degrees and minutes.

Long and Medium wave stations are used mainly for transmitting programs to listeners in the country in which the stations are located. These stations vary from powerful transmitters capable of being heard throughout the country to low power stations intended only for a small area in the vicinity of the transmitter.

FM (Frequency Modulation) Stations operate on very high frequencies (VHF); ranges of 88-108MHz in the Americas and 87-100MHz in other areas, and provide interference free reception over a short radius. Most FM stations relay programs of a medium or long wave station.

Frequency and Wavelength — Frequencies are measured in kilohertz per second (kHz) and megahertz per second (MHz). One hertz (named after the German physicist Heinrich Hertz) signifies "one cycle per second" and accordingly, one kilohertz (kHz) equals one kilocycle per second (kc/s). Wavelengths are measured in meters.

A formula between frequency and wavelength is as follows:

$$\text{Wavelength (m)} = \frac{300000}{\text{Frequency (kHz)}}$$

$$\text{Frequency (kHz)} = \frac{300000}{\text{Wavelength (m)}}$$

Several broadcasting stations announce frequencies in kilocycles or megacycles. A kilocycle is 1000 cycles. A megacycle is 1000 kilocycles.

Due to the propagational conditions, interference by other stations, jamming, malfunction of transmitter, reallocation of frequencies by a country or convention, or for some other reason, stations may use frequencies which are at variance with the frequency(ies) indicated in this handbook.

Beams: The azimuth of maximum radiation of the transmitting antenna is given in degrees (clockwise) from True North, where such details are given by the respective stations.

Program times used in the listings are based on the 24-hour clock. Midnight is 00.00 hours, 3 a.m. is 03.00 hours, 9 a.m. is 09.00 hours, and midday is 12.00 hours. Then, instead of starting another 12-hour cycle (p.m.), under the 24-hour system the hours increase until midnight. Thus 3 p.m. is 15.00 hours, 10 p.m. is 22.00 hours, and so on until 23.59 (11.59 p.m.) is reached and a new 24-hour cycle starts. This system eliminates any confusion between times a.m. and p.m.

Time Conversion: All programs are listed in GMT (Greenwich Mean Time). To convert from GMT to your local time, refer to the World Time Table on page 32 to determine how many hours your time is ahead or behind GMT, and add or subtract that amount in order to convert to your clock time. For quick conversion, it is useful to write the GMT hours, 00 to 24, down on one side of a sheet of paper, and then enter the correct local time opposite each GMT hour. Summertime or Daylight Saving time, adds an hour to local time so this should be taken into account in countries where it is utilized.

Program schedules: The program schedules of many countries are divided into Home Services and Foreign Services. The Home Service programs are arranged by language and by program services or networks. The Foreign Service transmissions are generally arranged by beam area, and by language for each beam area. The times and frequencies of the programs in each language are listed together in order to facilitate the determination of the times and frequencies of the broadcasts in each language.

Therefore, if you wish to hear a broadcast in a particular language from a country, refer to the listing for the country of the time and frequency of broadcasts in that language. Most broadcasts are transmitted on more than one frequency, so try the various frequencies listed, to determine which one is received best at your location.

Identification of Stations: Most stations in Europe, Middle East, Africa and Asia identify by announcing their station name and location. Most stations in North America and Pacific (incl. Australia/New Zealand) identify by the use of a call sign of 3 to 5 letters of a combination of letters and figures, of which the first, or first 2, denote the nationality in accordance with the international list of prefixes. Most stations in Latin America use a call sign (sometimes not frequently announced), a station name, and location.

In addition, many stations use musical interval signals at sign on and between programs, in order to help listeners to find the station on their dial and identify it as the desired station. These interval signals are included in the country listings.

How to identify a Station by Frequency or Wavelength: When you hear a station that is unknown to you, first try to determine some clue to its identity by attempting to determine the langauge, noting the type of program, etc. Then, note the approximate frequency or wavelength indicated on your dial, and turn to the table "Short-wave Stations of the World" in the back of the Handbook, and ascertain what stations operate in that vicinity. Next, check the program listings to determine which of the stations are scheduled to operate at that time of day, and which are most likely to be audible at your location, depending on the power and distance away. For definite confirmation, it is desirable to wait for station announcement or interval signal.

Frequency Changes: The frequencies listed are those which were scheduled for use at the time of publication. However, due to a number of reasons, including interference and changes in propagation conditions, it may be necessary for a country to make frequency changes. Often only one of the frequencies on a program will be changed, so the new frequency can be determined by tuning in the other frequencies and listening for the announcement of the frequencies being used. Reference to a publication listing the latest frequency changes for the International Stations: the **Summer-Edition to the WRTH** (published mid-June each year).

Interference: Due to the present crowded condition of medium and short wave broadcasting bands, interference may be encountered from other stations operating on the same or closely adjacent frequency. In addition to interference from other broadcast stations, there may also be interference from "Jammers", which transmit a variety of noises in an attempt to prevent certain foreign broadcasts from being heard in the country operating the jammers. When intereference is encountered, try another of the listed or announced frequencies, if several are in use, or try a broadcast at another time.

Reception from Hard-to-Hear Countries: If you wish to hear a station or program from a particular country, refer to the listing from that country, determining first whether it has any broadcasts beamed towards your area or adjacent areas, if not, refer to the frequency, time and power listing to determine where and when reception might be possible. Also, note the bands and times when stations in other countries in that part of the world are audible. It is possible to hear many far distant stations, even if they do not beam programs to your area, by listening when the propagation and clearness of channel conditions are favourable.

Verification by QSL-cards: As indicated in the program listings for the various countries, many stations are interested in receiving reports from listeners about their transmissions. These stations acknowledge reports by sending listeners a QSL-card (verification) or letter. Most **international** broadcasting stations do not require enclosure of return postage and will reply with a QSL-card or letter. **Domestic** broadcasting stations do not normally request reports from foreign listeners, so return postage

Advertising in Nigeria?

Pick
RADIO NIGERIA!

Powerful network: 19 stations national coverage — lively programmes.
Lowest unit cost per 1,000 listeners.
Reach your clients in 18 languages including, of course, English through 3,000,000 wireless sets and 55,000 wired boxes.
60,000,000 Nigerians waiting for your messages.
What a big market !

should be sent with reports to these stations. Return postage should be sent in the form of an International Reply Coupon (IRC), obtainable at post offices in most countries. Reports should be sent to the station address given in the country listings. They can be written in English in most cases, but Spanish is preferred by South and Central American stations.

Reception reports are useful to radio engineers in selecting the most suitable frequencies for broadcasts beamed to your area. Reports are preferred in the SINPO code, which is as follows:

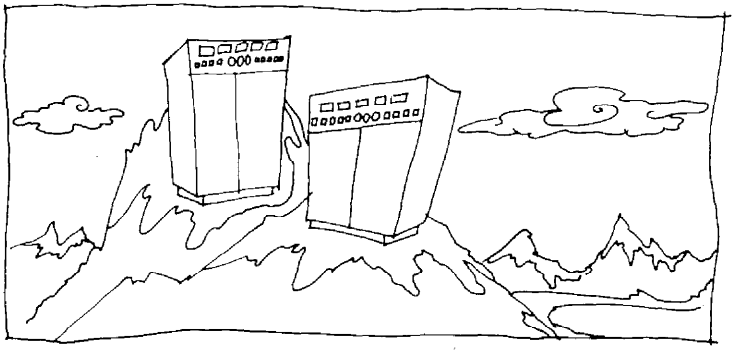
S (Signal Strength)	I (Interference)	N (Noise)	P (Prop. Disturb)	O (Overall Merit)
5 excellent	5 nil	4 slight	5 nil	5 excellent
4 good	4 slight	3 moderate	4 slight	4 good
3 fair	3 moderate	2 severe	3 moderate	3 fair
2 poor	2 severe	1 extreme	2 severe	2 poor
1 barely aud.	1 extreme		1 extreme	1 unusable

Electric Currents: For countries where information is available the type and frequency of current has been included; also, you will find in parenthesis an indication of the frequency stability; if stable enough for electric clocks (yes), if not (no).

Information about **Television Stations** is provided in the section following the radio section, including names and address of Television companies, location, power and channel of Television stations, and program schedules of these stations.

With reference to the first Television page we give a short explanation of some of the technical words and figures mentioned — The announced **location** of the station is usually the studio location, since most TV tr's are situated upon the highest location in the area in order to obtain more widespread coverage — Two systems of **modulation** are used to transmit the audio signal of the TV st's either frequency modulation (FM) or amplitude modulation (AM). All video transmissions are normally amplitude modulated — **Polarization** signals are horizontally polarized (H) or are vertically polarized (V). Polarization is usually selected according to the need for a reduction of interference with other stations, or to obtain engineering standards required by the government of the country in which the st. is located — The **band width** is shown in MHz and represents the limits within which both the video and audio tr. are contained — **Number of lines** transmitted express the number necessary to form one complete frame or picture, and **frames** state the number of times per second the picture area is completely scanned — **Video and Audio Power** is indicated in kilowatt (kW) or Watt (W). In most cases the figures denote the effective radiated power (ERP) due to the stations antenna system — **Video and Audio Frequency** is stated in MHz per sec. The relationship between the quoted figures and the limits of the video band varies among countries and can be determined by reference to the standards of the systems used by the respective countries.

FM hermits

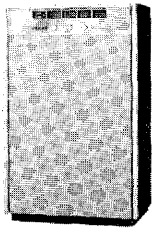


They don't need people around to provide continuous on-air operation.

RCA FM transmitters—from 1-kW to 40-kW—offer you built-in facilities that guarantee *continuous* on-air operation... even in unattended locations. They all have built-in provisions for remote control. And you can work them in parallel for automatic stand-by operation! Result: You'll have a fail-safe system. If one transmitter goes off, the other one continues to operate... *automatically!*

There are other options. You can increase power with virtually no increase in floor space—whether you own one RCA transmitter or two!

There's still more. Built-in provisions for simulcasting—monaural, stereo or multi-channel SCA, with the world's only stereo exciter offering integrated circuitry and complete instrumentation.



And the finest FM signal possible. This is *not* an option. It's yours as "standard equipment" with every RCA FM transmitter!

For complete details on the best of everything in FM—transmitters, antennas, transmission line, automatic logging and automation components contact your local authorized RCA Distributor, or the nearest RCA International Marketing subsidiary.

Special Abbreviations for Shortwave Listeners:
Q-Codes: The following "Q" Codes, devised at the Cairo Convention of 1938, are used among shortwave enthusiasts listening to broadcasting stations (so called DXers): QRG=Frequency; QRK=Readability; QRM=Interference (from other transmitters); QRN=Atmospheric interference (static); QRT=Close down; QSA=Signal strength; QSB=Fading; QSL=Verification (of reception); QTH=Location.

The following abbreviations are generally used in club publications:
BC=Broadcast; BCB=Broadcast band, i.e. medium wave band; CW=Continuous Wave, i.e. morse code; HF=High Frequency; ID=Station Identification; IRC=International Reply Coupon; LA=Latin America; mx=music; nx=news; OM=Old Man, a general term of greeting; RX=Receiver; SSB=Single Side Band; SWL=Shortwave Listeners; Tnx=Thanks; tr=Transmitters; 73's=Best Wishes.

THE INTERNATIONAL BROADCAST INSTITUTE

The International Broadcast Institute (IBI) is a non-profit, non-governmental, foundation-supported organization concerned with the contemporary revolution in communications. Its founders believe that advances in the technology of the mass media have far outraced man's understanding of their utilization in the service of society.

Achievements in engineering and electronics must now be matched by social and institutional arrangements to permit the freer flow of communications and their wider use for informational, cultural and educational purposes in both developed and newly-developing countries. Further, there must be a greatly accelerated series of objective studies concerning the impact of broadcast media upon viewers and listeners.

IBI seeks to bring together broadcasters, social scientists, journalists and others for a systematic analysis of the economic, cultural, social, legal and political factors related to these technological developments.

IBI plans to accomplish its objectives by commissioning and disseminating independent and objective studies; by organizing seminars, conferences and confrontations; and by publishing newsletters and other materials designed to illumine vital issues in the field of mass communications.

The IBI will not produce or distribute programs; will not compete with stations or networks; will not lobby for legislation; will not overlap or duplicate the work of existing international organizations such as UNESCO and the regional broadcasting unions; will not represent vested interests, whether economic or political; and will sell no services.

As an association of individuals rather than of institutional or governmental representatives it has advantages of flexibility, freedom of action and informality.

As a result of the initiative of the Ford Foundation the IBI was established in 1967 and opened its office in Rome, Italy, in February 1969. A Ford Foundation grant of $300,000 over three years was supplemented by smaller contributions and a pledge of support from the Rockefeller Brothers Fund if additional amounts could be raised from other sources. Efforts are now being made to broaden IBI's financial base by obtaining support from institutions in diverse countries and by enrolling Contributing, Voting and Supporting Members throughout the world.

Under the leadership of Chairman Olof Rydbeck, Director General of the Swedish Broadcasting Corporation and Honorary Chairman Yoshinori Maeda, President of NHK, Japan, twenty-nine Trustees from sixteen countries and the United Nations Secretariat establish policy which is carried out by a small staff in Rome. These Trustees are chosen as individuals, not as representatives of institutions or governments. Their names are listed on page 19 in this Handbook.

At the last annual meeting, which took place in Hakone, Japan, in May 1969, a number of projects were authorized. These include the following:

1. An international study of communication satellite tariffs.

2. A study of international law in relation to space communications to be conducted independently in at least three countries to come to grips with problems and opportunities presented by new technology.

3. A symposium on the new technology and its social consequences to be held in the fall of 1970.

4. A 1970 follow-up to the successful conference on problems of television news coverage which IBI held at the Rockefeller Foundation's Villa Serbelloni in Bellagio, Italy, during February 1969. This concerned the impact of the media as well as the possible influence of televised news coverage on the event itself.

5. A program to encourage an increase in the number and quality of doctoral dissertations in the field of international broadcasting.

6. The release for six months to one year of IBI Fellows by broadcasting organizations. During these periods the IBI Fellows would prepare monographs on subjects of their specialized competence. Topics would be selected for their broad implications to mass communications throughout the world.

It is hoped that as IBI membership increases, regional affiliates can be established and that these links will strengthen the possibilities of a freer flow of communications throughout the world. The founders of IBI believe that the new tools of communication give mankind a powerful weapon for survival and enlightenment. They propose to stimulate a world-wide dialogue about the role of mass communications and society.

Arthur D. Morse,

Arthur D. Morse, an American author and former Executive Producer of CBS REPORTS, is Executive Director of the International Broadcast Institute.

PHILIPS

This is the Philips Plumbicon* Colour Television Camera

- It is the finest camera of its kind. It is being acknowledged and acclaimed throughout the world of television as the most efficient colour camera now available. Used by the world's most important broadcasting organisations, it leads its field.

- This camera is but one of many outstanding Philips achievements. The skill, knowledge, ingenuity and ability, gathered throughout more than 75 years, have made possible the wide range of Philips products and systems for radio and television broadcasting.

- Philips equipment covers the complete range from microphone to broadcast transmitter, from television camera to aerial, from line amplifier to radio link.

*) Registered Trade Mark for television camera tubes.

THIS FEATURE-FILLED MIXER/REMOTE AMPLIFIER HAS AN UNEXPECTED* PRICE TAG

* Unexpected? Judge for yourself: the Shure M67 Professional Mixer/Remote Amplifier has virtually *every* important feature asked for by broadcasting and recording studios and sound installers. It can be used as a complete, compact console for studio, remote, or original installation use—or as an "add-on" mixer for expanding existing facilities and providing additional microphone inputs with tape recorders and VTR's.

It features 600 ohm line and microphone level outputs; an illuminated VU meter calibrated for +4 and +10 dbm; four low impedance microphone inputs, each with individual low-frequency filter inputs—plus one input convertible for line bridging, or 600 ohms; built-in tone oscillator to provide calibration signal to set signal levels; extremely low noise and RF susceptibility (noise level −126dbv); female Cannon connectors, two-level headphone monitor jack and many other features.

Its distortion level is UNDER 1% from 20 to 20k Hz at +10 dbm out! Clipping level is +18 dbm. It also features a unique *noiseless* automatic switchover to battery if the AC line fails. (Battery pack optional.)

It is not much larger than two cartons of cigarettes (11⅜" x 7½" x 2½") and weighs just 4 lbs. 4 oz.

SHURE PROFESSIONAL MICROPHONES . . . FOR SUPERIOR AUDIO

MODEL SM5
CARDIOID BOOM DYNAMIC

Because its cardioid directional pattern is uniquely uniform with frequency and symmetrical about its axis, the SM5 is singularly independent of the effects of environment. Even in extreme shooting situations (such as with tight sets, low ceilings, hard walls, low microphone angles, traffic or air-conditioner noise, and rumble and changing distance) the SM5 minimizes sound coloration and ambient noise pickup.

MODEL SM7G
¾" OMNIDIRECTIONAL DYNAMIC

Ideal for interviews and audience participation, yet unusually smooth wide range response (40-20 KC) for critical music reproduction. Instantly detachable from stand. Steel case with Cannon connector.

MODEL SM50
OMNIDIRECTIONAL DYNAMIC

Self-windscreened and pop free for news, sports, remotes, and interviews. Also ideal for many studio and control room applications. Comfortably balanced for hand or stand use. Natural response.

(UK), American Broadcasting Companies Inc. (USA), Columbia Broadcasting System Inc. (USA), National Broadcasting Company Inc. (USA), National Education Television (USA), National Association of Educational Broadcasters (USA), Time-Life Broadcast Inc. (USA), International Broadcasting Service of the US Information Service.

The ABU is a Union of national broadcasting organisations in the Asian/Pacific region which was formally established on 1st July 1964 following five Asian Broadcasters' Conferences held between 1957 and 1963 in Tokyo, Kuala Lumpur and Seoul. The first annual General Assembly of the ABU was held in Sydney in November 1964. Succeeding General Assemblies were held as follows: 1965, Tokyo; 1966, Taipei; 1967, Singapore; 1968, New Delhi; 1969, Auckland. Administrative Council meetings, the first of which was held in Tokyo in June 1966, have been held successively in Tokyo, Taipei, Bangkok, Singapore, Seoul, New Delhi, Kabul and Auckland.

Publications: ABU Newsletter (monthly in English), ABU Technical Review (Bi-monthly in English).

UNION OF NATIONAL RADIO & TELEVISION ORGANIZATIONS OF AFRICA (URTNA)

L.P: Pres. of the Union: Daniel Amiot-Priso (Cameroon); Vice-Pres: Garba Sidikou (Niger). Secr. Gen: M. Bassiouni. Dir. Technical Centre: A. H. Antar. Members of the Adm. Council: Cameroon, Chad, Congo-Brazza, Ghana, Ivory Coast, Mali, Niger, Nigeria and Senegal.

Headquarters: 101 Rue Carnot, BP3237, Dakar, Sénégal.

Technical Centre: A monitoring Centre is built in Markala (Mali). The duties of this centre are the following:

1) Monitoring the broadcasting frequencies of member organizations and submitting comprehensive listening reports; it will also give the necessary suggestions to avoid interference with one another or with other stations.

2) To measure the field intensity and the transmission frequencies of the different broadcasting stations of the member organizations and to forward a report.

3) To participate in the research and measurements carried out by different International Broadcasting Organizations and Unions and to exchange services and technical information with them. A Monitoring Service is presently provided to members from a temporary place; other technical services will be provided when the URTNA Centre is operative.

ARAB STATES BROADCASTING UNION (ASBU)

Nature: Intergovernmental union within the framework of the League of Arab States comprising the Arab Radio and TV Organisations (Established February 1969).

Supreme Body: General Assembly, meeting in ordinary sessions once a year. The Presidency of the Gen. Ass. held in rotation among the full members according to the alphabetical order of the names of the member States. The term of office: one year. The Vice-Presidency held by the member who shall assume the Presidency at the next session.

1969 Pres: Dia El Din El Refai (Jordan); Vice-Pres: Aly Shommo (Sudan). 1970 Pres: Aly Shommo (Sudan); Vice-Pres: Mohamed Said El Sahaf (Iraq).

Adm. Council: Pres.+Vice-Pres.+one full member according to the alphabetical order of the names of the member States.

General Secretariat: Add: 23 Kasr el Nil Str, Cairo, UAR. **Cable:** Asbunion, Cairo. Sec. Gen: Salah Abdel Kader.

Engineering Centre: Add: POB 2231, Khartoum, Sudan. Dir. Mostafa Allam.

Membership: Full members: Broadcasting organisations of Jordan, Sudan, Iraq, Syria, UAR, Kuwait, Libya, Palestine, Abu Zabii, Qatar.

Associate members: Other broadcasting organisations the General Assembly accepts by a majority of three-quarters of its full members.

Permanent Committees: Prgr. Comm: Pres. Aly Shommo. Engineering Comm: Pres. Aly Abu Kandil.

Exec. Dir: Arthur D. Morse. **Dep. Dir:** Hiroshi Sakamoto.

The IBI is non-profit, non-governmental, foundation-supported association whose objective is to foster the freer flow of communication and its wider use for informational, cultural and educational purpose. The IBI brings together broadcasters, scientists and social scientists, journalists and professional leaders for systematic analyses of the economic, cultural, social, legal and political effects of contemporary communication technology.

The IBI was formally established in September 1968, after preparatory and founding meetings in Italy, the US and England. In February 1969 the IBI sponsored an international conference on problems of television news coverage, and during 1970 it is holding a symposium on the new technology and its implications. The IBI's current research projects include studies of legal aspects of space communications, of present tariff practices for

satellite transmissions, of the impact of broadcast media and of communication systems in developing countries. Individuals may become Voting or Contributing Members of the IBI; Supporting Membership is open also to institutions, broadcasting organizations, foundations and corporations.

RECORDED MUSIC LIBRARIES

Most Recorded Music Libraries operating in England supply Recorded Music, often specially commissioned, generally of varied character (although some may specialise) and designed especially to meet the needs of programme producers in the fields of television, film and radio. Recordings are usually available on disc (either specially-produced 78 r.p.m. for facility of groove location, or microgroove) although ¼-in. tape versions at 7½ and 15 i.p.s. full track are often available by arrangement and some two-track stereo may be offered.

Conditions of usage vary in different territories but it should be pointed out that both the musical works and the recordings thereof are the copyright property of the owner-publisher and the public performance by any means is subject to the requirements of the Performing Right Society, 33 Berners Street, London W.1 (or their representatives in the territory concerned).

Moreover, the supply or purchase of recordings does not automatically grant any permission to copy or re-record the material on to film sound-track or any other sound-reproducing medium. Such copying is normally permitted, however, subject to licence issued in England by the copyright owner direct or on his behalf by a representative organisation (the Mechanical Copyright Protection Society, Elgar House, 380 Streatham High Road, London S.W.16) specializing in the collection of mechanical fees and the issue of relative licences. Producers are advised in their own interests to ascertain licencing details in advance to avoid any possibility of infringement. It should be checked also that the items concerned are available for world-wide distribution should such a need exist.

Prices and conditions of usage will gladly be supplied by the publisher concerned from whom also a classified catalogue can be obtained.

A MESSAGE FROM THE EDITOR

Once again we are happy to present a new and extended issue of the World Radio-TV Handbook — the 24th edition — updated with the advice of specialists and consultants in the field of international radio and television.

It has been our aim with this edition to provide everyone with a complete guide on which to start or continue listening to shortwave and mediumwave broadcasts from foreign countries and thus create the possibility for a better international understanding.

As a matter of fact the wealth of information from the steadily increasing number of radio and television stations is expanding rapidly from year to year and in order to be able to include all station details in future editions we have to inform you that from now on articles will be transferred to our other publication "How to Listen to the World".

I want herewith to thank **all** those who have made valuable contributions to this edition — broadcasting and television organisations, advertisers, radio clubs, DX-ers as well as other individuals.

A special thank to those members of the Arctic Radio Club of Sweden, and the Danish Shortwave Club International, who have assisted me by the updating of this edition.

J. M. Frost.

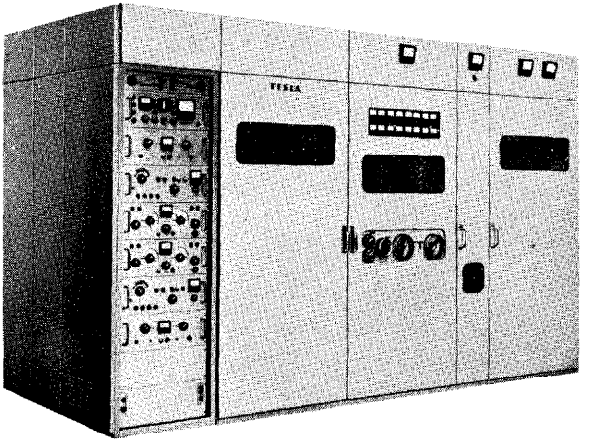
BROADCAST AND TV EQUIPMENT

TESLA



High-efficiency short-wave broadcasting transmitters from 1 to 100 kW output

Medium- and long-wave broadcasting transmitters from 20 to 1000 kW power output

Short-wave communication transmitters of 35 kW power rating, with SSB for transmission of two independent speech channels

Short-wave and long-wave telegraph transmitters of 50 kW and 70 kW power output

Television transmitters for bands I and III as well as IV/V, with power klystrons

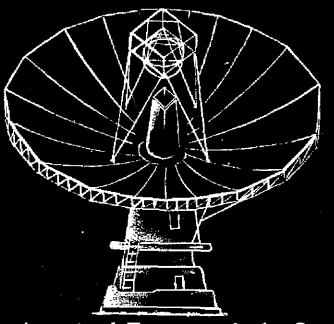
Fully transistorized studio equipment

New types of modern design and high efficiency. Projects and installations of complete transmitting centres

Detailed information will be gladly furnished on request

KOVO

Foreign Trade Corporation, Tř. Dukelských hrdinů 47, Praha 7, Czechoslovakia



Like a radar installed in the heart of Europe, Agfa-Gevaert can detect, day after day, the changing needs of the market.
Applying well-proven market research techniques, Agfa-Gevaert is able to take these requirements into account when planning research and to solve the ensuing problems by the most modern scientific methods. Agfa-Gevaert manufactures a complete range of motion picture films which are subjected to stringent quality controls at every stage of manufacture.
In addition, Agfa-Gevaert after-sales service is outstandingly good - whatever your problems, our technicians are always ready to listen and to help you to solve them.

The Best Imperfect Radio!

We don't claim the fantastic SONY CRF-230 is absolutely perfect. But this technological masterpiece is closer to perfection than any other radio anywhere in the world today! For example: a good receiver ordinarily has 4 bands. The SONY CRF-230 has 23 bands! The only radio to cover every station in every nation on earth!

Most people know that SONY transistor technology is just about unequalled. And now SONY has drawn upon its more than one decade of experience to create the finest receiver possible. So exceptional and complete are the specifications of this ultimate receiver, it would take more than two full pages of this magazine simply to list them! Frankly, we do not know of a single refinement or feature that this marvel does not have. For example: 4 antennae systems built-in, 3 FET's, 27 transistors for reception, 18 for Aux. functions, 32 diodes, 1 thermistor, and...the best thing is to see and hear this marvel of marvels at your SONY dealer soon.

SONY's CRF-230: The most incredible radio in the world today!

Research Makes The Difference

INTERNATIONAL FILM TV-FILM AND DOCUMENTARY MARKET

APRIL and OCTOBER

MIFED, the International Film, TVfilm and Documentary Market, is an international centre where feature, TV and documentary films are traded on a worldwide scale. Contacts are made there for negotiating agreements in any branch of film production, co-production, financing and the issue of import and export licences.
MIFED headquarters, which are equipped with all modern facilities and comforts, contain numerous rooms for the projection of cinema and TV films. International cable, telephone, telex and telefoto facilities are available. Also conference rooms, offices, dining rooms and bars. Medical assistance on the premises.

2 GRAND AWARDS FOR TELEFILMS

MIFED is held in Milan twice a year: in APRIL to coincide with the Milan Fair, and in OCTOBER.

MIFED

For information and bookings write to:
MIFED - Largo Domodossola 1 - 20145 Milano (Italy)

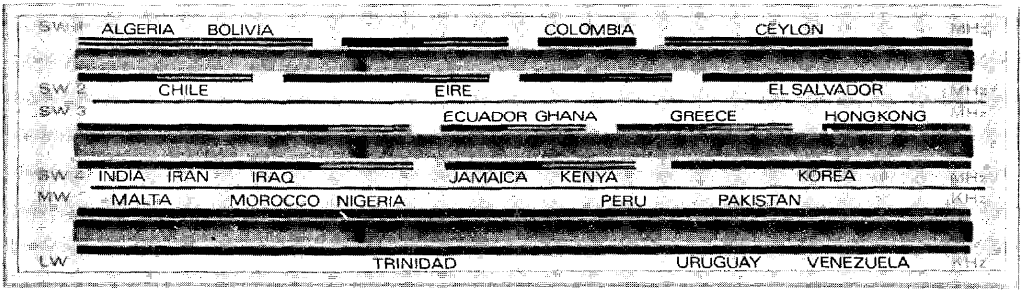
THE PYE ENTREPRENEUR'S DIAL



These aren't stations. They are areas where Pye are helping local businessmen to assemble and sell radio and television. We call it the Pye Assembly Franchise Plan.

This plan :—

1. Selects the entrepreneur.
2. Surveys the market.
3. Helps to set up factory and production facilities.
4. Supplies engineers and technical know-how.
5. Assists in credit arrangements.
6. Supplies materials and component parts.
7. Assists with selection and training of staff.
8. Gives guidance on marketing and permits the entrepreneur to market the parts or products under a local name or the famous Pye banner.

The Pye Assembly Franchise Plan began in 1954. It is a separate entity with its own staff and its own factory. Franchise holders have the convenience of dealing with a compact unit plus the confidence of knowing there are vast technical resources in the background, with experienced technical engineers to back the plan.

Flexibility

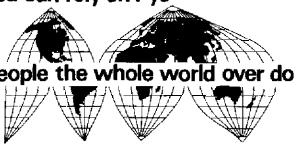
The plan is kept completely flexible to meet local economic conditions and tastes. Orders range from parts for 500 receivers to from one thousand to ten thousand ready-to-assemble TV receivers. Designs range from the most basic to the most sophisticated. Another look at the markets on the Entrepreneur's Dial will give you an indication of some of the competitive experience we have gained in the field during the past 15 years. Enterprising technicians and businessmen in these markets have proved the success of this plan. It now accounts for nearly 50% of all Pye Radio and TV exports. And its growing.

If you are visiting the U.K. in the near future, you are invited to look round our Overseas Assembly factory at Lowestoft, England. It's the ideal place to discuss the technical know-how and staff training programmes mentioned earlier.

Your First Step

If you would like to know more about the Pye Assembly Franchise Plan, please write to the Export Director or telephone him (reversing the charges) from anywhere in the world! He and his team have 15 years of experience in answering the questions that are probably going through your mind.

You can rely on Pye



Pye Group (Radio & Television) Ltd.,
P.O. Box 49, Cambridge, CB4 1DS, England.
Telephone No. Cambridge 58985
Telex Pyrad 81105.

STANDARD FREQUENCY & TIME SIGNAL STATIONS

The ordinary sw-listener soon notices a specialized technical prgr. of tones and time pulses usually received on carrier freq's of 2.5, 5, 10 or 15MHz and sometimes on 20 and 25MHz, if he listens in that part of the spectrum. These signals have many uses in science and technology. They are most useful to the non-specialist in obtaining accurate time, in checking the calibration of his radio receiver, and in gaining information on radio propagation conditions. The forecasts of the present and future state of the ionosphere can be quite useful in determining the possibilities of sw-reception. The forecasts are given by WWV and JJY for certain parts of the globe.

R. STN. WWV, WWVH, WWVB and WWVL (Gov.)
St. WWV, Box 83-E, Route 2, Fort Collins, Colorado 80521, USA; St. WWVH, Box 578, Puunene, Maui, Hawaii; WWVB/WWVL, Box 83-E, Route 2, Ft. Collins, Colo, USA — **L.P:** Chief Freq. and Time Broadc. Sce's: Peter P. Viezbicke. National Bureau of Standards, Boulder, Colo. 80302. Eng. in Charge: John T. Stanley (WWV, WWVB and WWVL); Eng. in Charge: S. Katahara (WWVH).

Standard Radio Frequencies:
WWV 2500kHz 2.5kW, 5000kHz 10kW, 10000kHz 10kW, 15000kHz 10kW, 20000kHz 2.5kW, 25000kHz 2.5kW; The broadcs. are continuous, night and day, exc. from 45 min 15 sec to 49 min 15 sec past each h — WWVH 2500kHz 1kW, 5000kHz 2kW, 10000kHz 2kW, 15000kHz 2kW: Continuous exc. from 16 min to 19.59 min after each h — WWVB 60kHz 13kW: Continuous — WWVL 20kHz 1.8kW: Continuous, except for exp. changes.

Program:
WWV transmits radio propagation forecasts in International Morse Code every 5 min's just preceding the voice ann's; the IUWDS "Geoalert" is broadc. in International Morse Code each h from WWV during the first half of the 19th min and from WWVH during the first half of the 49th min. Greenwich Mean Time is ann. from st's in Intern. Morse Code each 5 min. At WWV a voice ann. of Greenwich Mean Time is given each 5 min as follows: "National Bureau of Standards, WWV, Fort Collins, Colo. Next tone begins at . . . hours . . . minutes Greenwich Mean Time". At WWVH a voice ann. of Greenwich Mean Time is given each 5 min as follows: "National Bureau of Standards, WWVH, Maui, Hawaii. Next tone begins at . . . hours . . . minutes Greenwich Mean Time". WWVB transmits a special time code consisting of 10db carrier reductions each second for 0.2, 0.5 or 0.8 sec (format on request). Transmitted phase will be advanced 45° for 5 min. each h between 10 min. and 15 min. after the hour. No special identification will be given. WWVL is still experimental and operates on 20kHz; also 19.9, 20.5 and 20.9kHz. WWVL current format: 20kHz from min to min+10 sec; 19.9kHz from min+10 sec to min +20 sec, then again. No other identification or codes used — **V.** by QSL-card or letter. **Pub:** Prgr. sched. on request. In addition to the 20kHz carrier other exp. freq's near 20kHz may be transmitted alternately or simultaneously.

STATION LOL
Addr: Servicio de Hidrografia Naval, Observatorio Naval, Avenida Costanera Sur 2099, Buenos Aires, Argentina. **Standard Freq. and Signals:** 5000kHz 2kW, 10000kHz 2kW, 15000kHz 2kW: From 04.00 1st Sun in Oct. to 03.00 1st Sun in April: 11.00-12.00, 14.00-15.00, 17.00-18.00, 20.00-21.00, 23.00-24.00; From 03.00 1st Sun in April to 04.00 1st Sun in Oct: 12.00-13.00, 15.00-16.00, 18.00-19.00, 21.00-22.00, 00.00-01.00 — **Schedule:** 3 min dash (1000 or 440cs alternately) beginning at 00 00, 00.50, 00.10, etc. Then 3xLOL in morse at min's 03, 08, 13, 18, 23 . . . in the h followed by ann. at min's 04.50, 09.50, 14.50 . . . ("Observatorio Naval Argentina, ... Horas . . . . minutos"). T.S. transmission at min. 55-58 in each h — **V.** by QSL card folder. Re. wanted.

STATION VNG — AUSTRALIAN POST OFFICE
Addr: Station VNG, c/o Assistant Dir. Gen, Radio Section, Postmaster-General's Dept, 57 Bourke St, Melbourne, Vic. 3000, Australia. **Cable:** Radiogen. **L.P:** Divisional Eng. R. Trainor.

Stations: Lyndhurst: 4500kHz 09.45-21.30; 7500kHz 22.45-22.30; 12000kHz 21.45-09.30 (all 10kW). The st. transmits seconds signals of 50 cycles, of 1000Hz tone. The 59th second of each min. is omitted. Seconds 55-58 are shortened to 5 cycles. For min's 5, 10, 15, etc, seconds 50-58 are shortened to 5 cycles. Between 20 and 50 of mins. 15, 30, 45 and 60 a recording is played: "This is an Australian Post Office standard frequency and time signal tr. from VNG Lyndhurst Victoria on 4.5, 7.5 and 12MHz" . . . — **V.** by QSL-card.

OBSERVATORIO NACIONAL, Brasil
Originates time signals, which are broadcast by stations PPE and PPR.

PPE: Addr: Serviço da Hora, Observatorio Nacional, Rua Gen. Bruce 586, Rio de Janeiro, GB ZC-08, Brasil — **L.P:** Chief Eng: C. G. Lacombe — **Station:** 8721kHz: 13.25-13.30, 20.25-20.30, 00.25-00.30.

PPR: Addr: Radio Rio, Av. Francisco Bhering, Arpoador, Rio de Janeiro, GB — **Stations:** 435, 8634, 13105, 17194kHz, 14.25-14.30, 21.25-21.30, 01.25-01.30.

DOMINION OBSERVATORY, Canada
Addr: Observatory Crescent, Ottawa 4, Ontario, Canada. **Te:** 232-8211. **L.P:** Adm: Dr. J. Hodgson. Dir. Tcc: M. M. Thomson.

Stations: CHU 3330kHz 90.09m 3kW — 7335kHz 40.90m 3kW — 14670kHz 20.45m 3kW. **T.S:** Continuous by voice and seconds pulses. Freq. control by Calsium clock. **Ann:** English: "CHU Canada, Eastern Standard Time". French: "CHU Canada, Heure normale de l'est". **V.** by QSL-card. Re. welcomed. **Pub:** Station information free.

STATION CCV, Chile
Addr: Instituto Hidrográfico de la Armada, Casilla 324, Valparaiso.

Stations: 4271. 8558, 12960kHz — **Transmissions:** 11.55-12.00 on 4271/8558kHz; 13.55-14.00, 15.55-16.00 and 21.55-22.00 on 8558/12960kHz; 00.55-01.00 on 4271/8558 kHz.

STANDARD FREQUENCY STATION OMA
Addr: Budecska 6, Praha 2, Vinohrady, Czechoslovakia. **Te:** 258758. **L.P:** Dir: B. Sternberk — **Stations:** OMA 50kHz 20kW: 24 h — OMA 2500kHz 1kW: 24 h — OLB5 3170kHz 5kW: 24h — **Ann:** In morse code — **V.** by QSL-card. Re. wanted.

CENTRE NATIONAL D'ETUDES DES TELECOMMUNICATIONS
FFH: Addr: 196, rue de Paris, 92 Bagneux, France. **Te:** 532-40-00. **L.P:** Chief Eng. Freq. Dept: P. la Maida. Chief Eng: B. Decaux.
Station: FFH 2500kHz 5kW: 08.00-16.25 (Mon-Fri), no transmissions in minutes 25-30 — **Ann:** In Morse on the 9th and 49th minute.

BUREAU INTERNATIONAL DE L'HEURE
Addr: 61 Avenue de l'Observatoire, Paris 14, France. **L.P:** Dir. B. Guinot — **Stations:** St. André de Corcy FTA91 91.15kHz 45kW: 08.00, 09.00, 09.30, 13.00, 20.00, 21.00, 22.30; Pontoise FTH42 7428kHz 6kW: 09.00, 21.00 — FTK77 10775kHz 6kW: 08.00, 20.00 — FTN87 13873kHz 6kW: 09.30, 13.00, 22.30 — **V.** by letter.

DCF77, MAINFLINGEN, Germany
Addr: Physikalisch-Technische Bundesanstalt, Braunschweig, Bundesallée 100, Fed. Rep. of Germany. **Cable:** Bundesphysik. **Te:** 5921. **L.P:** Pres: Prof. Dr. Ing. M. Kersten.

Station: DCF77 77.5kHz 12kW and transm, extends essentially from 06.45-10.35, 19.00-20.10 and around every full h until midnight. Call-sign DCF77 in morse-code, amplitude modulations 440 and 200 c/s. Interruptions every second (duration 50 ms). **Pub:** Prgr. schedule on request.

GERMAN HYDROGRAPHIC INSTITUTE
ADDR: P.O. Box 220, 2 Hamburg-4, W. Germany. **Te:** 311121. **Cable:** Hydrodienst. **L.P:** Head Times Sce: Dr. H. Enslin.
Unmodulated time signals at 23.55-00.06 on DAN-2614 kHz (2kW), DAO-2775kHz (2kW), DAM-6475.5kHz (5kW) (21/3-20/9); DAM-12763.5kHz (15kW) (21/2-20/9); DAM-4265kHz (5kW) (21/9-20/3); DAM-8638.5kHz (10kW) (21/9-20/3); 11.55-12.06 on 2614, 2775, 8838.5, 16980kHz (15kW).

LF transmissions: Unmodulated time signals at 07.01-07.10, 10.01-10.10, 19.01-19.10, 19.31-19.40, 20.01-20.10, 21.01-21.10, 22.01-22.10, 23.01-23.10, 00.01-00.10, 01.01-01.10, 02.01-02.10 on DCF77-77.5kHz (12kW); no transmissions from Sat 10.10-Sun 19.01; 01.01-01.10, 02.01-02.10 only 1/3-21/10) . . .
DAM = Elmshorn: DAO = Kiel; DAN = Norddeich; DCF77=Mainflingen.

CENTRAL INSTITUTE OF PHYSICS OF THE EARTH, TIME SERVICE
Addr: DDR-15 Potsdam, Telegrafenberg A 17. **L.P:** Dipl-Ing: G. Hemmleb.
Station: Nauen (DIZ) 4525kHz 5kW: 09.45-08.15.

NATIONAL PHYSICAL LABORATORY (Gov.)
Addr: Div. of Electrical Science, Teddington, Middlesex, Gt. Britain. **Te:** 01-977 3222. **Cable:** Physics, Teddington. **Telex:** 262344.

MFS Standard Frequency Service:

kHz	m	kW	
60	5000	50	continuous
2500	120	0.5	continuous*

10000	30	0.5	continuous*

*continuous but tr. interrupted 6 times an h at mins 5-9½, 15-19½, 15-29½, etc.
Ann: Call sign given nine times in morse at minutes 9½-10, 19½-20, 29½-30 on the H.F. transmissions, and twice in the six seconds preceeding the hour on the 60kHz transmission except between 14.30 and 15.30 when it is the same as the H.F. schedule — **V.** by letter.

ROYAL GREENWICH OBSERVATORY
Addr: Time Dept, Herstmonceux Castle, Hailsham, Sussex, England. **Te:** Herstmonceux 3171. **Cable:** Observer.
The international Time Signals are radiated by GBR 16kHz (reserve: GBZ 19.6kHz) at 03.00, 09.00, 15.00 and 21.00 — **V.** QSL-cards not available.

ATA, NEW DELHI, INDIA
Addr: National Physical Laboratory, New Delhi.
Stations: 10000kHz 2kW: 05.30-10.30.

IAM, ROME, ITALY
Addr: Istituto Superiore delle Poste e delle Telecomunicazioni, Rome. **L.P:** Dir: Ing. F. Martorana — **Station:** 5000kHz 1kW — 07.30-08.30 (W), 13.00-14.00 (Mon-Fri), during summer one h earlier. **Ann:** With Morse code followed by hour GMT in Morse code or by phone ann.

IBF, TURIN, ITALY
Addr: Istituto Elettrotecnio Nazionale, Corso Massimo d'Azeglio 42, Torino. **Te:** 688773 — **Stations:** 5000kHz 5kW: W 06.45-07.00, 08.45-09.00, 09.45-10.00, 10.45-11.00, 11.45-12.00, 12.45-13.00, 13.45-14.00, 14.45-15.00, 15.45-16.00, 16.45-17.00, 17.45-18.00 — **Ann:** "Emissioni di frequenze e tempo campioni dall'Istituto Elettrotecnico Nazionale". The voice ann. is repeated in French and English: "IBF, Signaux horaires et fréquence étalon de l'Institut Electrotechnique National, Turin, Italie" and "IBF, Standard Frequency and Time Signals from the National Electrotechnical Institute, Turin, Italy".

STATION JJY
Addr: Radio Research Laboratories, Koganei, Tokyo, Japan. **Te:** (0423)81-1661 — **L.P:** Chief Freq. Standard Div: Y. Saburi — **Stations:** All 2kW nd, 24h: 2500kHz — 5000kHz — 10000kHz — 15000kHz — All freq's are interrupted at 29-34 min. past each h. Mod. seconds pulses of 8 cycles of 1600c/s and 1000c/s tone — **Ann:** At 34-35 min's and 59-00 min's in each h identifying signals are tr. consisting of call-sign in morse code (twice), time in JST once in morse code, call-sign twice in voice, time in JST once in voice and grade of propagation warning in morse code — **V.** by QSL-card.

ZLFS, LOWER HUTT, New Zealand
Addr: Physics and Engineering Laboratory, Lower Hutt, New Zealand. **Station:** 2500kHz 0.3kW: CW only Wed 01.00-04.00 — **Ann:** St. identification is made in morse code at the beginning and end of each tr.

STATION OBC, Peru — Addr: Estación Central de Comunicaciones Navales (Radio), Callao, Perú.
Stations: OBC 490/12307kHz: 12.55-13.00, 14.55-15.00, 15.55-16.00, 16.55-17.00, 18.55-19.00, 20.55-21.00, 22.55-23.00, 00.55-01.00, 02.55-03.00, 04.55-05.00 (Time Signals); 15.55-16.00, 20.55-21.00, 01.55-2.00 (Wrp. and information for navigators).

RUSSIAN STANDARD FREQUENCY STATIONS
RWM: 5000, 10000, 15000kHz — **RTA:** 5000, 10000, 15000kHz — **RKM:** 5000, 10000kHz — **RID:** 15000kHz. No other details available.

REP. OBSERVATORY SOUTH AFRICA
Addr: Republic Observatory, Johannesburg. **Te:** 43-2026. **Cable:** Astronomer — **L.P:** Dir: J. Hers — **Stations:** Call ZUO: Olifantsfontein 5000kHz 4kW — Johannesburg 10000kHz 0.25kW — Johannesburg 100MHz 0.050 kW: 24 h per day, exc. for interruptions 15 to 20 min. past each h.
Time Signals: Continuous second pulses, consisting of 5 cycles of 1000c/s tone. The minute pulse is prolonged

WORLD PUBLICATIONS
LINDORFSALLE 1, HELLERUP, DENMARK

offers you elder editions of

HOW TO LISTEN
TO THE WORLD

which all contains up-to-date valuable and interesting articles for world-listeners.

For instance: How to report, Interferences, Principles of the different s.w. receivers, Receiver calibration, How to improve medium wave reception, Listening to the different continents etc.

Only few copies left. Price each: D.Kr. 3.00, US$ 0.50, £0/6/0, DM 1.50 plus transport: . .

Other elder publications, which we offer you for the net-price: D.Kr. 5.00, US $0.75, £0/6/0, DM 3.00 including transport: . .

The band selections have been made on the basis of both propagation conditions and operating schedules.
A dash in the band column indicates reception is not expected due to difficult propagation conditions or stations not normally operating in propagationally suitable bands.

---

to about ½ second — **Ann:** In morse code every 15 min's (just before each quarter hour): ZUO, ZUO, ZUO followed by the Universal time of the next minute. **V.** by letter will be answered if they are genuine reports.

US NAVAL OBSERVATORY, Navy Department, Washington, DC. 20390, USA — **L.P:** Dir. Time Sce. Div: G. M. R. Winkler.
VLF Time Signals are aired from 55th to 60th min's as follows: NSS (Annapolis): Each h on 21.4kHz; **NBA** (Canal Zone) each even h exc. 23.55-24.00 on 24.0kHz. **HF Time Signals** begin 5 min's before the h and terminate on the h. **NSS** (Annapolis): 04.55, 10.55, 16.55, 22.55 on 88kHz, *5870, 8090, 12135, 16180kHz (*exc. Tues 16.55 when on 185kHz); 16.55, 22.55 on 20225 and 25590kHz — **NPG** (San Francisco): 23.55, 05.55, 11.55, 17.55 on 114.95kHz, 4010, 6428.5, 9277.5, 12966, 17288 and 22635kHz — **NPM** (Honolulu): 23.55, 05.55, 11.55, 17.55 on 131.05kHz, 4525, 9050, 13655, 16457.5 and 20575kHz — **NPN** (Guam): 23.55, 05.55, 11.55, 17.55 on 484, 4955, 8150, 13530, 17530, 21760kHz — **NBA** (Canal Zone): 04.55, 10.55, 16.55, 22.55 on 147.85kHz, 5448.5, 11080 and 17697.5kHz.
High precision corrections are available upon request. These "Daily Phase Values" give the time of emission of a positive zero crossing of the carrier frequency with respect to the Observatory master clock. All US VLF stations, the radio navigation system "OMEGA" and the US Coast Guard LORAN-C stations are listed on these weekly bulletins.

SATELLITES AND THE 70's

by Daniel D. Karasik Manager for Television Development
Communications Satellite Corporation

Daniel D. Karasik is Manager for Television Development of the Communications Satellite Corporation (COMSAT) with headquarters in Washington, D.C. In this capacity, he is responsible for coordinating satellite systems and facilities to provide optimum television and sound broadcast services. Mr. Karasik also advises and assists overseas communications administrations and broadcasters in developing, planning and coordinating telecasts via satellite.

Mr. Karasik joined COMSAT in the fall of 1966 after 20 years as a journalist, foreign correspondent and television producer. For six years before coming to COMSAT he was a writer-producer-director of public affairs programs for NBC News. Working out of Washington, he helped produce a number of NBC's award-winning documentary "specials". Among them were, Japan: East Is West (1961), U.S. ‡1: American Profile (1962), Shakespeare: Soul of an Age (1962), Polaris Submarine: Journal of an Undersea Voyage (1962), Orient Express (1962), Sikkim and Its Yankee Queen (1964), and J.F.K. Remembered (1964). His awards include two top Venice Film Festival prizes — a first in 1963 and a second in 1962.

Mr. Karasik began his career with the Chicago Daily News. After five years of newspapering in Chicago and Europe, he received a Ford Foundation fellowship for work in the Far East. (During World War II, after completing the course at the Navy Japanese Language School, he served as a Combat Intelligence Officer with Navy and Marine units in the Pacific). As a Ford Fellow, Mr. Karasik was the first American admitted to Tokyo University graduate school by examination in Japanese.

After two years writing and study in the Far East, Southeast Asia and Africa, Mr. Karasik went to work as a national television reporter for CBS News. At the time of the Hungarian Uprising, he went to Europe as the chief of the network's Vienna Bureau and for two years did television and radio reporting from Eastern Europe.

Mr. Karasik has a B.A. in Japanese Studies from Yale University. His graduate work in Japan as a Ford Fellow was in applied economics. He lives with his wife and two children in Bethesda, Maryland.

In this new decade communications satellites will bring dramatic changes to the patterns of television and radio broadcasting throughout the world. In the last few years broadcasters have been prompt to explore — and exploit — the myriad program possibilities of television via satellite. Although the broadcasting organizations of the world have already brought their viewers a remarkable series of events by satellite, what is past, I feel, is only prologue to what we shall see in the years ahead.

The global communications satellite system, realized in 1969, will have its first full year of operation in 1970. This is an extraordinary achievement, considering that man-made satellites of any kind are a fairly recent phenomenon. In the fall of 1957 when the Soviet Union orbited its first Sputnik, I was a CBS correspondent in Europe and happened to be in Lugano, Switzerland, when the Soviet Union launched its first Sputnik. Although the Soviet satellite had a tremendous political impact at the time, none of us standing on a balcony of the Hotel Splendide watching its pinpoint of light travel across the evening sky realized that Sputnik signaled a new communications age. It was only a year before — in 1956 — with the laying of the first transatlantic **telephone** cable, that high quality voice communication between Europe and North America had become possible.

The full impact of the potential of space for communications was dramatized in 1962 with the first live television transmission between France and England and the United States via the experimental satellite, Telstar. The passes of the low altitude Telstar limited transmissions between Europe and North America to about 30 minutes. But even these comparatively brief transmissions demonstrated the tremendous potential waiting to be developed.

In August of 1962, the Congress of the United States passed a novel piece of legislation recommended by President Kennedy. This bill, the Communications Satellite Act of 1962, called for the establishment of a world-wide communications satellite network.

In July of 1965, the International Telecommunications Satellite Consortium's first experimental satellite — INTELSAT I, more commonly known as Early Bird — went into regular commercial service.

Although the overwhelming bulk of INTELSAT traffic — and revenue — is from telephone and record communications, it is intercontinental television via satellite that has captured the public imagination. Very few people are aware that there are now more high-quality telephone circuits spanning the Atlantic by satellite than there are by cable.

On the other hand, the general public knows that satellites have made it possible to witness a number of historic events of our rapidly changing world — and, of course, outstanding sports events.

Television by satellite has had a remarkable growth. In 1966, the first full year of commercial operation, there were just over 80 hours of television by satellite. In 1967 the total of about 225 hours almost tripled that figure. And again, in 1968, the total time of television transmission by satellite — some 666 hours — almost tripled the 1967 figure. At the time of this writing it is already apparent that the amount of television by satellite in 1969 will greatly exceed that of 1968. The year saw such television highlights as the coverage of the Apollo missions to the moon and man's first steps on the lunar surface as well as the first satellite transmission from Africa when Pope Paul visited Uganda. In 1965 when the first commercial communications satellite service was established via Early Bird, the system encompassed five earth stations in five countries. By the end of 1969 it was expected that twenty-four countries would be operating 42 earth station antennas at 36 different earth station sites. During 1970 about 20 new earth stations are expected to begin operating, significantly expanding services in Africa, the Near East and Asia, and adding three new stations in Latin America.

During the year 1971, about ten new stations are expected to begin operating — Ecuador, Honduras, Ivory Coast, Martinique, Nigeria, East and West Pakistan, Scandinavia (Sweden), Senegal and Zambia.

In 1972 another seven new earth stations are expected to start operating — Algeria, Israel, Netherlands, Sudan, Switzerland, Turkey and the United Arab Republic. By the end of 1973, it is expected that about 80 stations will be operating in 52 nations all over the world.

Aside from the proliferation of earth stations and the improved quality of satellite television services, I believe that one of the principal reasons for the rapid growth in the use of satellites for television has been the continuing reduction in the cost of transmissions.

Briefly reviewing the development of the INTELSAT system provides a glimpse into the economics of satellites that has made — and, I hope, will continue to make — rate reductions possible.

INTELSAT I, or Early Bird, was launched in April of 1965. It had a squinted antenna that served the North Atlantic community with a nominal 240 two-way 4 kHz voice circuits. to provide television — two simultaneous monochrome channels or one color channel — the satellite had to be cleared of all telephony traffic. Early Bird had an expected life of one and a half years, so we say it had a capacity of 1½ x 240 circuits, or 360 circuit years. (Early Bird was taken out of regular service in January of 1969 after three and one-half years of operation — still performing well but outdated by more advanced and larger satellites.)

The next generation of satellites, the INTELSAT II's, were launched in 1966 and 1967. They also could provide some 240 circuits but their antennas were configured to cover a much broader area. The INTELSAT II's could provide a one-way television service with release of circuits in about half of the satellite. INTELSAT II's life expectancy was 3 years, and so we say its capacity was 240 x 3 or 720 circuit years. Consequently, in just one generation, we find that the circuit years have already doubled.

The launching of the INTELSAT III series of satellites began in 1968. These are considerably larger and more powerful, and can provide a nominal 1200 circuits for five years. Actually, about a quarter of the satellites' capacity is reserved for television and other occasional uses, and with the advent of INTELSAT III the tedious process of arranging for release of circuits in order to provide a television service was no longer necessary. The circuit year capability of this satellite jumps to 6000 — i.e. 1200 x 5 years' life expectancy.

Look ahead for a moment to the INTELSAT IV satellites which we expect to start launching in 1971. These satellites will provide an average of some 6000 circuits for an expected life of 7 years, making 42,000 circuit years.

Therefore, in the short period of five or six years, satellite capacity will have increased by about a hundred and twenty times, while the cost of such a satellite emplaced in space will have increased by no more than five times.

The significant factor here is the affect on the INTELSAT investment cost of a circuit year in the satellite. INTELSAT's investment per circuit year for the circuits in Early Bird, or INTELSAT I, was $15,300. For the INTELSAT IV the cost is expected to drop to about $500, or less than 4% of the Early Bird cost. Consequently, we have seen some dramatic reductions in satellite circuit costs. For example the COMSAT tariff for television from an earth station in North America to the satellite for service to Europe today — $660 for the first ten minutes — is less than 15% of the peak color charge for the same service in 1965.

As noted earlier, each of these satellites has what is to all intents and purposes capacity reserved for a television channel on a 24-hour-a-day basis. The quality of television provided by INTELSAT III is about three times better than that provided by the INTELSAT II satellites. We also have a greatly enhanced audio capability. Each satellite has the equivalent of 24 4-kHz channels reserved for television-associated audio services. This provides one broad-band channel for program audio and up to 21 additional 4 kHz channels for commentary or coordination purposes.

INTELSAT has made these audio channels available so that they may be ordered up and goodnighted individually, thus, satisfying what was recognized as a broadcaster requirement.

During 1970 a second INTELSAT III will be available in the Atlantic area. Thus, one INTELSAT III will be stationed over the

equator at 31°W and the other at 6°W. The 31° satellite will be used by stations in North and South America and in France, Germany, Italy and Spain. The 6° satellite will work with stations in Canada and the United States, the United Kingdom, France and parts of the Near East and Africa. There will be a television channel available in each satellite. Consequently, there will be a capability to provide two simultaneous telecasts. For example, while Brazil is transmitting a football match to Argentina, Chile, Peru and Mexico, a cultural program from France could be transmitted to stations in Greece, Lebanon and Africa.

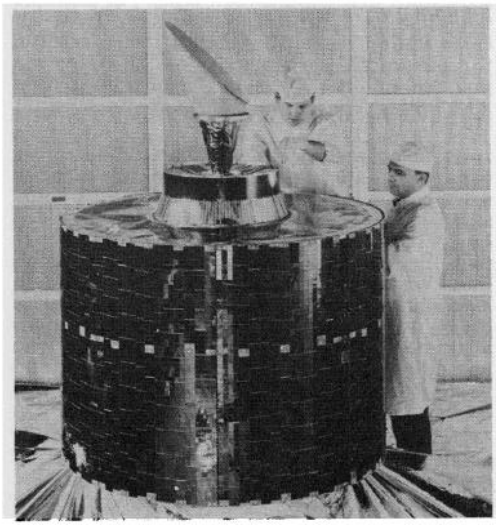
The INTELSAT IV — the first of which is expected to be in service over the Atlantic in early 1971 — will be approximately 8 feet in diameter and will have an overall height of about 18 feet.

In October of 1968 a $72 million contract was awarded to Hughes Aircraft Company for delivery of four spacecraft and one prototype in about two years.

The satellite will have a despun antenna and two steerable dish antennas, permitting transmissions to be sent in concentrated beams to heavily populated areas where communications needs are greatest.

The INTELSAT IV's will have 12 transponders (instead of the INTELSAT III series). Four of these can be switched to operate via the east spot beam and four can be switched to operate through the west spot beam — or all 12 can operate in the broadbeam global configuration. The east spot beam will cover roughly the area of Europe, Morocco and Algeria. The west spot beam will cover eastern North America and Puerto Rico.

Depending on the transponder configuration and size of carriers assigned, each satellite will provide from 3,000 to 10,000 telephone circuits. The total effective radiated power of Early Bird was 20 watts, INTELSAT II 35 watts, INTELSAT III 300 watts and INTELSAT IV will have the capability of radiating 2,400 to 25,200 watts depending on the beam widths. Each of the 12 INTELSAT IV repeaters will have an effective radiated power of 200 watts with a 20° beam and 4,000 watts with a 4.5° beam.



An INTELSAT III series satellite with a capacity of 1200 high quality voice circuits is shown here in a test chamber.

This will be a big and powerful bird, and it is expected to provide excellent television service. The first will be placed in synchronous orbit at 24.5° West over the equator. At that time is is expected that one of the Atlantic INTELSAT III's will be moved to the Pacific to help meet Pacific requirements until an INTELSAT IV is available in that area.

Present plans are to launch INTELSAT IV in the Pacific in 1972.

(There have been discussions about using the remaining INTELSAT III in the Atlantic as a "main trunk in the sky" for large traffic streams providing an alternate path between Europe and North America, but agreement on this concept is still pending).

At the present time, it is believed that the INTELSAT III satellite in the Indian Ocean will not be filled to capacity, even at the end of its design life in 1974. Consequently, plans call for an INTELSAT IV to be available to replace the Indian Ocean INTELSAT III in 1974.

At the time of this writing frequency plans for INTELSAT IV are not complete. It appears that one transponder will be reserved for television and it is anticipated that an additional channel can be made available when required. It is also hoped that arrangements will be made for sound broadcasting. Plans have not yet been decided.

Just as the transmission of television by satellite has — and will continue to — develop extremely rapidly, so will many other applications of this remarkable technology. I am sure that in a decade there will be a number of applications of satellite communications wed to other technologies not even foreseen today.

For industry, of course, the picture is quite clear. It will make increasing use of good communications to expand and exploit markets abroad. Large organizations will use transmission of high speed data to keep their fingers on the pulse of sales in remote markets, to keep production relevant to demand, to determine inventories, to automate order handling and shipping, not to mention billing.

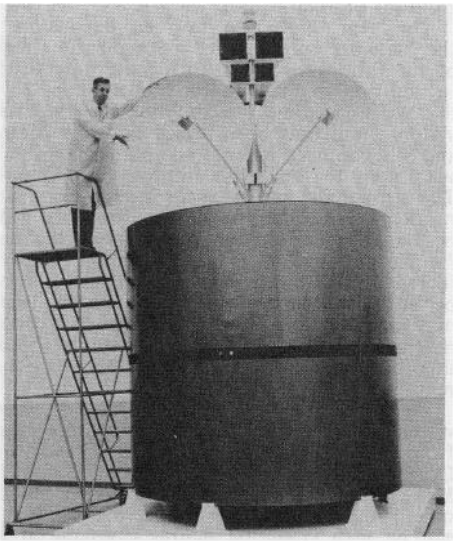
Computer will communicate with computer to assemble marketing studies and other relevant information from centers located around the world. Through a device such as your own telephone, you will have remote access to computers in various world centers. As the immense communications capacity of the satellite becomes available throughout the world — and as that capacity continues to grow — the economic threshold will go lower and lower so that uses that are technically possible will become economically feasible.

There will be opportunities for many innovations. The other day I was looking at the jacket of a record I had purchased a few years back. The record was produced in the United States by an American firm, and was of balalaika music by the OSIPOV Russian State Folk Orchestra. The jacket headlined the fact that in 1962 the recording involved the "huge task of sending four and a half tons of recording equipment with recording staff from New York to Moscow". It also said that it was the first recording ever made in the Soviet Union by American technicians, musical staff and equipment.

I would imagine that moving that mobile van, as well as personnel, from New York to Moscow, involved considerable expense — not to mention time and trouble. Satellites have the capability of delivering extremely high fidelity signals — mono or stereo — over great distances. Why move all the equipment and people? Might it not be more economical and practical to bring the music to the recording studios by satellite?

An infinite variety of news and cultural events — from many parts of the world that were never before accessible in real time — will become available to the broadcaster through communications satellites. Satellites will be able to bring you live performances — in AM, FM, or FM stereo — by new performers from practically any city in the world.

Another unique characteristic of the satellite for communications — aside from its immense capacity — is its multi-destination capability.



Full scale model of INTELSAT IV. Looming over nearby sugarcane fields is this 97-foot diameter parabolic dish antenna at the Cayey, Puerto Rico, earth station for commercial satellite communications. The facility is capable of handling and processing all types of communications: multi-channel telephone, teletypewriter, facsimile, data and both color and black and white television.

From its vantage point 22,300 miles out in space the satellite can transmit simultaneously to every earth station within the beam of its antenna. In other words, all earth stations that can "see" the satellite can receive its signal at the same time. This can have a number of interesting applications. The television networks are already looking to satellites for distribution of programs. TV news services, syndication services, news agencies and weather services, among others, are actively investigating the satellite's multi-destination capability to distribute their output speedily, economically, and efficiently.

Satellites will affect the world's listening and viewing habits. Audiences exposed to a variety of experiences and stimuli by ever-broadening programming opportunities will undergo certain changes in taste. Perhaps the 70's will see soccer rank with baseball as favourite TV spectator sport in the United States — and American-style football may someday be seen on the TV screens in South America, Europe, Africa and Asia.

Certainly we shall see more active interregional cooperation among individual broadcasters and broadcasting organizations. This is already necessary because of the increasingly complex arrangements for organizing coverage, clearance of rights, scheduling and coordinating changes in multi-destination transmissions, and sharing costs involved in large international pools.

It is my personnal hope and belief that the 1970's will see the birth of a **world** broadcasting organization, encompassing the regional broadcasting organizations in all areas of the earth, and acting as a clearing house for information and program materials, a planning center, and an operations coordinator at the service of broadcasters everywhere.

EUROVISION IN 1969

by J. Treeby Dickinson,
Chief Engineer
Technical Centre of
the E.B.U.

I need make no apology for starting my report on the activities of Eurovision in 1969 by referring to the Apollo 11 Moon landing, in the early hours (for European viewers, at least) of Monday, 21st July. This was undoubtedly the most spectacular event of the year's viewing and its interest was of course particularly dependent on television.

The Apollo 9 and 10 missions had already provided a "dress rehearsal" for the Moon landing, and almost all the electronic equipment, including the special lightweight field-sequential colour-television camera which was used within the command module, had been tested and demonstrated on those occasions. The complexity of the arrangements for covering not only the launch at Cape Kennedy, Florida, and the Mission Control Room at Houston, Texas, but also the "splash down" of the returning space capsule in the Pacific Ocean entailed close collaboration between the EBU Operations team at Houston and the staffs of the other organisations involved, notably NASA and the EBU's North American Associate Members, ABC, CBS, and NBC

Although the centre of interest on that occasion was inevitably the Moon landing itself, another record was set nearer the surface of the Earth, when three communication-satellite circuits were connected in tandem for the first time to relay live pictures of the recovery of the space capsule from the Pacific Ocean to viewers in Europe, involving the use of both Earth-stations in Japan, linked specially for the occasion by terrestrial circuits. This solution had to be contrieved as a result of the failure of the Atlantic INTELSAT-III satellite shortly before the event, and the excellent technical quality of the transmission is a tribute to the design of the INTELSAT-III satellites.

There were several other first occasions during 1969. In particular, there was the first television transmission from Africa by satellite, during the visit of the Pope to Uganda. This was made possible by the use of a transportable Earth-station provided by the Italian Telespazio company, and outside-broadcast equipment provided by the RAI to supplement that of the Uganda Television Service. The high technical quality of the pictures received in Europe on that occasion too provided a foretaste of what will become a matter of routine as soon as the permanent Earth-stations in that continent enter service in the not-to-distant future.

Indeed, the expansion in the number of Earth-stations equipped for the transmission and reception of television signals was one of the most important developments of 1969. In addition to the completion of the second stations at Goonhilly (United Kingdom), Raisting (Federal Germany), and Plemeur-Bodou (France) for operation with the Indian Ocean INTELSAT-III satellite, new Earth-stations were opened at the following sites: Beirut (Lebanon), Bahrien, Kuwait, Mar del Plata (Argentina), Itaborai (Brazil) and Hong Kong, bringing the total number in operation up to 23 at the time of writing. Several other Earth-stations, notably those in Colombia, India, Indonesia, Iran, Kenya, Malaysia, Morocco, Nigeria, Pakistan, Senegal, the Sudan and Venezuela were also due for completion in late 1969 or early 1970.

New terrestrial circuits were taken into service also during 1969. Apart from those installed to increase the capacity of existing routes, newly-installed facilities now enable two further television networks to take part in Eurovision operations. One of these links the production centre of the Hellenic National Broadcasting Institute in Athens (Greece) to the Eurovision Network through Italy, and the other permits transmissions in both directions between France and Algeria, instead of only those towards Algeria as was hitherto the case. The entry into service of these new international junctions was marked by important Eurovision programme transmissions in each case; that from Athens consisted of the coverage of the European Athletics Championships, whereas that from Algiers was the opening ceremony of the first Pan-African Cultural Festival.

The year 1969 also saw an expansion of the network of circuits permanently leased by the E.B.U. for use in Eurovision operations; in addition to the circuits shown on p. 22 of the World Radio-TV Handbook for 1969, one vision circuit has been leased between Malmö and Stockholm (Sweden) and another from Paris via Lyons to the Swiss frontier near Geneva. The growth of traffic at its present rate will result in its becoming advantageous to lease permanently certain other circuits in the near future, although it is also apparent that the increased flexibility with which circuits can be utilised when they are permanently leased may make it desirable to incorporate certain new sections in the permanent network before this becomes attractive for purely economic reasons.

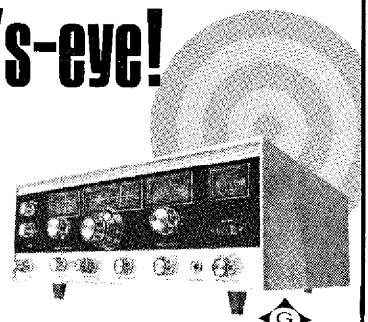
The exceptionally high figures for Eurovision traffic in 1968, arising to a large extent from the political situation in France and Czechoslovakia and the Olympic Games in Mexico, has resulted in an apparent falling-off in the growth rate for 1969, so far as can be seen from the figures available at the time of writing. During 1968, 2.612 tranmissions were handled by the EBU Technical Centre in Brussels, with a total duration of 1,515 hours. These figures were 25% and 27% greater respectively than those for 1967. During the first six months of 1969, however, the number of co-ordinated transmissions fell from 1.402 during the same period of 1968 to 1,244 although their toal duration increased from

815 to 830 hours. The foregoing figures, however, do not include those for the Daily News Exchanges (which have been effected regularly twice daily since April, 1969). in which 2,415 news-items were distributed to an average of eleven television services each during 1968, compared with 2,009 news-items to an average 10.5 services in 1967. In the first six months of 1969, the number of news-items distributed was 1,293.

Although seperate statistics are not available for colour television, it is evident that colour transmissions are forming an increasingly large proportion of the traffic. Apart from the eight EBU members in Europe which were regularly broadcasting in colour by the end of 1969, some ten others have been engaged in experimental colour broadcasting, and in both cases many of them include colour programmes received through Eurovision. It has even been reported that the sales of colour television receivers have been influenced by some popular Eurovision transmissions, such as those from the Olympic Games and the Apollo space missions.

The construction in 1969 of the circuits linking Athens with the other participants in Eurovision operations virtually marks the end of the geographical expansion of Eurovision "on the ground", that is to say, without having recourse to the use of satellites. Although the EBU has long-term plans for its own satellite system, as described in the article by Mr. Hansen in the 1969 World Radio-TV Handbook, the EBU is not neglecting its continuing task of improving the reliability and flexibility of operation of the existing terrestrial circuits. For this reason, a remotely controlled switching system is now being installed. This will enable the television circuits to be interconnected as required at the principal junction points on the Eurovision permanent network, by means of commands sent from the Eurovision Centre in Brussels. When this system is in full operation, the added flexibility and speed of operation will no doubt be quickly taken for granted. Although a successful Eurovision transmission is one in which the average viewer is unaware that it is different in any technical way from a programme produced in his local studios, there may still be some who will miss the "exotic" element in transmission from the more distant points of origin. However, before the illusion can be complete, a considerable effort must be made to improve the sound quality of Eurovision transmissions and this is another field in which EBU has made some progress during 1969, although its fruits may not become apparent immediately. In this context, an interesting development was a new method of conveying the sound component of a television programme over the wide-band circuit carrying the vision component; this system, developed by the BBC, provides a quieter and "higher-fidelity" sound channel than is otherwise practicable over long distances, and the EBU is at present examining the possibilities of using it in Eurovision applications.

Galaxy hit the bull's-eye!



THE BEAUTIFUL NEW R-530 BY GALAXY $695.00

NOW, a competitively priced general coverage receiver for the most exacting short wave listener...the solid-state R-530 by Galaxy. The result of 3 years of exhaustive research, the R-530 was designed for the exacting standards of laboratory, amateur, broadcast and HF monitoring and point-to-point complex system communications. The R-530 incorporates the finest components, the most desirable features and the most up to date engineering possible. It provides accuracy of 1KHz tuning throughout the 0.5 to 30 MHz frequency spectrum. Its frequency stability is amazing...less than 100 Hz drift after turn-on.

We cordially invite you to come in or write for complete specifications. Export inquiries invited.

Easy financing...10% down or trade-in down...No finance charge if paid in 90 days...Good reconditioned equipment

R. AUSTRALIA'S DARWIN-STATION

by P. W. R. Homfray, Director of Radio Australia

A high power high frequency broadcasting station is being constructed on the northernmost tip of Central Australia, on Cox Peninsula, about ten miles across the harbour from the city and port of Darwin. Cox Peninsula was chosen because ample space was available, actually, twelve square miles have been taken over — and then because it is close enough to Darwin to have the use of that city's facilities: for instance, power for the transmitters comes from the Darwin powerhouse and is fed at 66,000 volts through two submarine cables. Furthermore, the Peninsula is Australia's closest point to South-East Asia and it lies in the path of transmissions beamed northwards from Shepparton. The new station is being provided to increase the effectiveness of the present Radio Australia broadcast transmissions to the areas north and north west of Australia.

When completed and comes into full operation towards the middle of 1970, the new station will be the highest powered broadcasting station in Australia and will be of world standard in size and power. The first test transmissions from the station took place in February 1969. Regular evening transmissions to South and South East Asia are now being maintained. Regular transmissions to East Asia and the Philippines are expected to begin early in 1970.

The estimated total cost of the station is about $A-9 million divided almost equally between the radio engineering works and the other engineering works involved in establishing sites, buildings, roads and power supplies for the station. It is the only station in the world, whose staff goes to and from work by launch . . . across Darwin Harbour.

The high-power station complex is being established on the Cox Peninsula some six miles by sea north-west of Darwin. Two separate stations will be installed — a transmitting station on the north-west tip of the peninsula and a receiving station approximately eight miles east of the transmitting station.

Initially, programme for the Darwin station will be obtained at the new receiving station by reception of Radio Australia programme broadcast from Shepparton. Results to date indicate that there is no significant difference in programme quality between relayed programmes and direct transmission from Shepparton. A microwave system to link Darwin with the south is currently programmed for completion in 1972, and a conventional programme feed will then be available.

The two receiving aerials are vertically polarised log periodic types designed and manufactured by Co-el of Italy for optimum performance on the Darwin-Shepparton path, with high front-to-back ratios to minimise cross-fire from the nearby 250 kw transmitters, as well as interference from existing high-power transmissions in areas north and north-west of Darwin. The outputs of these antennas are fed to four diversity receiving terminals manufactured by Racal Electronics, U.K. The output of the diversity receiving terminals is monitored and selected by an operator for relay to the transmitting station via a microwave radio link manufactured by Radio Corporation of America. This microwave system loops the programme through Darwin to permit the Australian Broadcasting Commission to monitor and insert programme material if necessary.

The transmitting installation will comprise three American-built Collins Model 821A-2 high-frequency transmitters, each capable of delivering a power output of 250 kw. These transmitters represent the latest advances in broadcasting technology and embody extensive solid-state circuitry.

The major points of interest in the transmitter designs are:—

(a) the use of a high-speed digital computer system for transmitter control and checking. Besides providing for normal on-off frequency changing and tuning requirements on the transmitters, the computer control will carry out all routine testing and logging of transmitter operating conditions at predetermined intervals and will record this data as a permanent record. In the case of a transmitter fault occurring, the computer control will close down the equipment, provide an alarm and accomplish diagnostic investigation, under direction, to isolate the fault.

(b) the power amplifiers and modulator stages of the 250 kw transmitters will utilise vapour-phase-cooled tubes with maximum anode dissipations in the order of 300 kw. The use of vapour-cooled anodes reduces the water flow to only 5 per cent of that required for earlier water-cooled tubes and enables the high heat energies involved in the 250 kw transmitters to be dissipated in a cooling system of acceptable physical dimensions.

(c) the 250 kw transmitters are designed to operate at full carrier power output when the modulating signal (usually speech) is heavily clipped to raise the average depth of modulation and so enhance the intelli-

gibility of the transmissions in the presence of noise at the receiving locations. The distortion resulting from the clipping process is acceptable on speech programmes, and when full clipping (trapezoidal modulation to a depth of 95%) is employed, the intelligibility of the transmission from a 250 kw transmitter equals that of a 550 kw transmitter operating without trapezoidal modulation.

Programme input equipment for the transmitter is being fabricated by Post Office staff in South Australia, with the exception of the Swiss Brown Boveri speech clipping and compressing amplifiers which are necessary for the trapezoidal modulation process.

The three transmitters will be connected to the five antennas via open-wire transmission lines of 500 kw power-handling capability through a Brown Boveri matrix switch enabling any transmitter to be connected to any antenna.

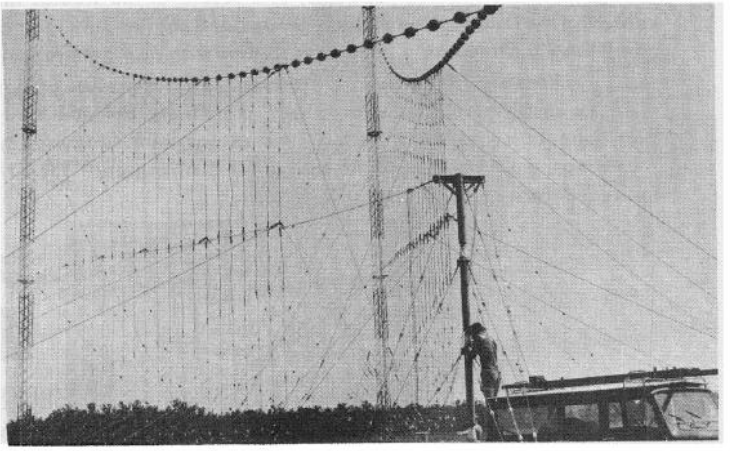
The transmitting antennas are two-bay, vertically polarised log periodic arrays erected above a highly-conductive earth system but with a balanced input impedance to enable direct connection to the balanced transmission line system.

A total of five log periodic arrays will be installed to cater for transmissions to the required target areas on the Asian continent.

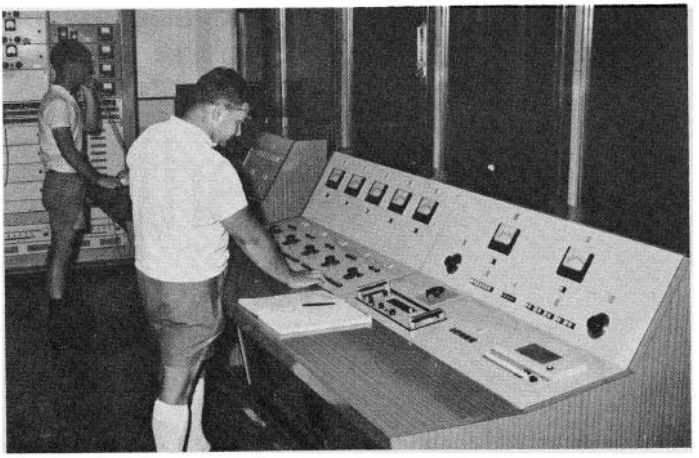
The transmitting arrays are designed for 500 kw working to permit parallel operation of two 250 kw transmitters on one transmission should this be required in the future. The design of the antenna provides for maximum received signal levels in the target areas while also providing a high degree of protection on other bearings, particularly rearwards, to minimise cross-fire into the receiving station aerials.

With an average gain of 18 dB available from the transmitting arrays, the effective radiated power using 250 kw transmitter powers will be 23 mega-watts towards the target areas.

By utilising the log periodic type of aerial array, it is possible to cover all transmission requirements from three transmitters with only five arrays and a simple transmission line-switching facility. A 500 kw dissipative line constructed from stainless steel tubing is to be used as a non-radiating test load for the transmitters.



Spider webs of wire in receiving aerials at new station. Transmitting aerials have same principle.



Technicians at a control panel at new station.

INVESTING IN MULTI-TRACK?

Here are 5 sound reasons why the Ampex MM–1000 is your best investment.

1. **It's expandable.** Our 8-channel MM-1000 Master Recorder costs only moderately more than other 8-channel recorders. But with the MM-1000 you can readily expand to 16 or 24 channels. Add-on 'kits' enable you to add channels as you need them. Or you can buy the MM-1000 — 16 or 24 channels completely checked out and ready-to-go.

2. **It's designed to handle wide tape.** The MM-1000 tape transport is designed to handle 1″ and 2″ tape. It's the same transport that's now in use on over 3000 Ampex video tape recorders. When you go from 1″ to 2″ tape, you just change the tape guides and the plug-in head assembly. Lets you quickly change from 1″ for 8-channels to 2″ for 16 or 24 channels.

3. **It's versatile.** The MM-1000 offers more standard and optional features than any other master recorder. Tape Motion Sensing for instance. Allows you to change modes without going into stop and without stretching or breaking tape. Automatic Tape Lifters? Yes, and with manual override. Ping Ponging? Sure. Sel-Sync? Naturally. Also remote Sel-Sync. How about Variable Speed Motor Drive Amplifier? Yes again, plus an Electronic Timer with up to 4 remote readouts for pinpoint accuracy. Versatile? You bet!

4. **It's promotable.** "New Generation" recording capability is built into the MM-1000. The new groups demand this capability and record at the studios that offer it. The MM-1000 is capturing the imagination of these groups, and challenging their creativity. With the MM-1000 you'll have a promotable edge over studios with past generation equipment.

5. **Its applications are totally unrestricted.** The wide range of applications for the MM-1000 mean its cost is amortized over a very short time. The MM-1000 may typically be used for Pop music recordings, master Classic recordings, multi-language synchronised with videotape recordings, multi-channel sound source for film transcriptions. Or simply as a 'soul mate' in the search for innovation in music.

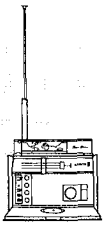
Now, in one masterful stroke, Zenith obsoletes all would-be imitations with the most ingenious integration of power, sensitivity, and tuning versatility ever designed into the world's most famous multi-band portable radio!



Introducing the new Royal 7000 Zenith Trans-Oceanic in a new design, with a new chassis...with more bands, more features for finer performance than ever before!

all-new Zenith TRANS-OCEANIC® Royal 7000

Receives Medium Broadcast, FM, European Longwave... Marine, Weather, Ship-to-Ship and Ship-to-Shore, Time Signals... Amateur, CW and SSB signals...plus the new VHF crystal-controlled Weather Band. Tunes bandspread on the most popular 31, 25, 19, 16 and 13 meter International Shortwave Bands!

Also new in the Royal 7000 Trans-Oceanic are a Beat Frequency Oscillator, a "Norm-Sharp" IF switch, and an Automatic Gain Control that can be manually adjusted for navigational direction finding.

New, too, in this radionic marvel by which all other multi-band portables are judged, are a plug-in earphone, tuning meter, battery level indicator, azimuth bearing indicator, tilt-out chart light, a logging scale with adjustable hairline for most accurate indexing, and a tuner output jack.

In addition, a built-in AC power supply lets you operate the new Royal 7000 Trans-Oceanic on either 115V or 230V AC current with batteries automatically disconnected.

Write now for a full description of the new Royal 7000 Trans-Oceanic and name of your nearest Zenith representative.

Rugged new cabinet of diecast zinc in Ebony color, high impact Cycolac® with padded vinyl sides. 9-3/8" high; 13-3/4" wide; 6-1/4" deep. Model Royal 7000Y

Zenith Radio Corporation, International Division, Chicago, 60639 U.S.A.
The Royalty of television, stereophonic high fidelity instruments, phonographs, and radios.

ZENITH®
The Quality Goes In Before The Name Goes On

. . . 25 YEARS LATER . . .

Josef C. Nichols, Chief, International and Satellite Communications Unit, Radio and Visual Services Division.

A quarter of a century ago, the peoples of the United Nations solemnly proclaimed their determination

to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and

to promote social progress and better standards of life in larger freedom.

Today, twenty-five years later, these goals of the international community have lost nothing of their importance. In fact, international co-operation today is more urgent than ever — to cope not only with the great problems that already existed in 1945 but also with the many new questions posed by the unprecedented changes that have occurred over the past quarter of a century in virtually every field of human endeavour.

Nowhere are these changes more evident than in the realm of communications.

The United Nations was born into the era of the capricious wire recorder, the 50 kw shortwave transmitter, the experimental television station, and the as yet unrealized dream of coaxial telephone cables across the oceans. This year, as the World Organization observes its twenty-fifth anniversary, mankind is rapidly advancing into the era in which all human beings, no matter where they live, will truly be able to be citizens of one world, in the sense that they will have the possibility of becoming instantaneous witnesses, in sight and in sound, of virtually every important event in every part of the globe.

Naturally, the United Nations has followed various aspects of the communications revolution with the greatest of interest. Particularly in the field of space communications, the UN General Assembly has recognized its responsibility for the establisment of an appropriate international legal framework and has already authoritatively spelled out a number of important agreed principles.

Thus, the Assembly stated as early as 1961 that "communication by means of satellites should be available to the nations of the world as soon as practicable on a global and non-discriminatory basis". Only recently, the Assembly reaffirmed this statement and recommended that "States parties to negotiations regarding international arrangements in the field of satellite communication should constantly bear this principle in mind so that its ultimate realization may not be impaired".

In 1968 the United Nations convened in Vienna a Conference on the Exploration and Peaceful Uses of Outer Space, with the participation of 74 countries. The problem of space communications was given high priority, and the presentations and discussions on this topic made an important contribution to further international co-operation in this field. Particular attention was paid to ways and means of making the benefits of space communication available to developing countries.

Further, the General Assembly has given to its Committee on the Peaceful Uses of Outer Space the task of examining the various implications of space communications. In 1969 a Working Group of the Committee considered in detail the technical feasibility of communication by direct broadcast from satellites and the current and foreseeable developments in this field, as well as the implications of such developments in the social, cultural, legal and other areas.

The United Nations also attended, in observer capacity, the Plenipotentiary Conference on Definitive Arrangements for the International Telecommunications Satellite Consortium (INTELSAT Conference) as well as the meetings of the Preparatory Committee of the Conference.

Last but not least, the UN Secretary-General has responded to a General Assembly resolution noting "the potential importance of communication satellites for use by the United Nations . . . for both operational and informational requirements", and has formulated concrete plans to make such use possible. Communications satellites are already being utilized by broadcasting organizations the world over for their reports from UN Headquarters.

Thus, twenty-five years after its creation, the United Nations not only continues the global effort to find solutions for man's age-old problems, but also stands in the forefront of international co-operation in a field which only recently has been opened up by human ingenuity.

The ultimate aim of that international co-operation under the aegis of the world Organization is inspiring indeed: to ensure that the remarkable benefits of outer space science and technology are shared by all mankind.

THE VOICE OF DENMARK STOPS AT THE PEAK OF ITS POPULARITY

by Vagn Skovgaard, Prgr. Secretary, Radio Denmark, Shortwave Dept.

While the Danish Radio Commission is still at work, the board of directors of Radio Denmark has taken the decision that the Shortwave Service cease its foreign service from 1st January, 1970.

As many of our listeners may know, the Danish Shortwave Station celebrated its 20th anniversary last year. But the Danish Shortwave Service is at least 30 years old. As early as in 1937 Denmark was active on the shortwave bands with primitive programmes in Danish, broadcast over a weak transmitter for the benefit of the Danes living abroad. During the occupation, Denmark had to close down. But already then a new and strong transmitter was being planned, and after the liberation, the construction of the new station started. Unfortunately the transmitter was a pre-war type and thus already somewhat obsolete when taken into use in October 1948. At that time, however, the Shortwave bands were not so crowded and the start of the station was therefore very successful.

Denmark had learnt a lot from wartime broadcasting, particularly the broadcasts from the BBC in many foreign languages had shown what a wonderful medium radio is — and especially Shortwave Radio — when you want to communicate to other peoples across all borders.

This was the reason for an introduction of a Danish foreign service (although a rather humble one) right from the start in October 1948. And we are certain that our listeners agree that it has not been a national or political "propaganda machine" but has only served to place Denmark on the map and tell about this country for better or for worse.

Other countries saw the political influence that could be exerted through the shortwave bands, and particularly the "Cold-War" period witnessed an enormous expansion in international shortwave activities — including a lot of jamming stations.

This made conditions very difficult for the small countries. Some of them — Switzerland, Holland, and — to a certain extent — Sweden and Norway — took up the challenge. Though many attempts from the Danish International Service were made to convince the management that a more powerful station was required, their efforts were in vain.

It is expected that, in due time, a more powerful transmitter will be utilized for the Danish language broadcasts, but it is not likely that the decision to wind up the English and Spanish transmissions will be reversed.

Those working on the Foreign Service programmes find the situation deplorable, particularly as the listeners appear to appreciate the quality of the programmes transmitted. Thus one listener in the US wrote in to say that the more difficult the conditions of broadcasting for Radio Denmark, the higher the level of our programmes became. Today the response from listeners is higher than ever before. We would like to emphasize the excellent co-operation we have had with our non-Danish listeners, and to express to you our warmest thanks.

And by the way — if you should like to keep in touch with Scandinavia and developments in this area after April 1, 1970, we suggest that you tune in to the International Service of Radio Sweden.

The above article carries news which we can only regard with considerable regret. The WRTH is noted for its factual content. However, on this rare occasion we feel it necessary to comment on what we hope will remain a unique event.

The decision of the board of directors of Radio Denmark to cease the foreign side of its shortwave service must be respected. It can only be assumed that a decision of this nature was not taken lightly. Nevertheless, in our role in the field of international communications, we feel the need to reaffirm the importance of the type of foreign service which Radio Denmark has provided.

Communication is our field. This edition describes some of the enormous strides forward which we shall experience in the '70's; but specifically the emphasis of these articles is on the universal communication of world *events*. While this is important we feel that *international understanding* — the understanding of each other's attitudes and problems — is more important. This understanding is at the root of our survival.

It is in this field that the foreign service of Radio Denmark was amongst the leaders. Political propaganda was not stressed. The programmes reflected the very nature of the Danish people — inter alia, their musical tastes; news broadcasts reported their internal problems; commentaries and discussions portrayed their attitudes — in essence it was the Danish "culture" which was presented to non-Danish people. It is this depth of communication that we are concerned to protect.

We hope that the loss of such a communication medium will never recur. We ask broadcasters, where possible, to remind themselves that although the economic benefits of outside broadcasts in foreign languages can never be assessed in monetary terms — in terms of mutual understanding these services are invaluable.

J. M. Frost, Editor

RADIO BROADCAST RECEPTION CONDITIONS EXPECTED DURING 1970

By George Jacobs, Chief Frequency Division, Voice of America, U.S. Information Agency, Washington, D.C. 20547

By international agreement, broadcasting stations are allocated the following specific bands in the radio spectrum:

LONG WAVE (*Low Freq.*)		MEDIUM WAVE (*Medium Freq.*)	
Kilocycles	**Meters**	**Kilocycles**	**Meters**
150-285	1053-2000	525-1605	187-571

SHORT WAVE

Tropical Broadcasting Bands

Kcs.	Megacycle Band	Meter Band
2300-2495	2	120
3200-3400	3	90
4750-5060	4	60

HIGH FREQUENCY BROADCASTING BAND

Kcs.	Megacycle Band	Meter Band
3900- 4000	3.9	75
5950- 6200	6	49
7100- 7300	7	41
9500- 9775	9	31
11700-11975	11	25
15100-15450	15	19
17700-17900	17	16
21450-21750	21	13
25600-26100	25	11

While the majority of the world's broadcasting stations operate within these bands, some operate outside. Most out-of-band operations, however, take place on frequencies adjacent to, or on the edge of the bands allocated for broadcasting.

The Long-Wave band (used in Europe) and the Medium-Wave Band (used worldwide) while allocated mainly for domestic broadcasting, are used also for some international broadcasting to adjacent countries. Although long- and medium-wave stations are normally heard only for moderate distances, long-distance reception is possible over dark transmission paths, mainly during the fall, winter and spring months in the reception area.

The Tropical Broadcasting Bands are assigned for use for domestic broadcasting in tropical areas, where high atmospheric noise levels limit the service area of medium-wave stations. DX reception on these bands is best when the transmission path between the transmitter and receiver is all or mostly in darkness. These bands are used mainly by stations in Latin America, Africa, South and Southeast Asia and Oceania.

The High Frequency Broadcasting Bands, or shortwave bands as they are also called, between 3.9 and 26.1 megacycles (11 and 75 meters) are used for both international and domestic broadcasting. These bands are allocated for worldwide use, except that the 3.9 and 7Mc bands are not allocated for broadcasting in the American area. Also, the 3.90 to 3.95Mc portion of the 75 meter band is used only in Asia and Oceania.

Reception conditions on these bands vary according to the time of day and season of the year. Most of the international broadcasting stations make seasonal changes in frequency usage, mainly on the first Sunday of March, May, September and November. Changes may often be made at other times during the year, due to interference, change of program times, addition of new transmitters, etc. A large percentage of the domestic broadcasting stations operating in the high frequency bands do not make seasonal changes, but some, particularly the stations in India, Pakistan, USSR and South Africa, do make seasonal shifts.

Shortwave, and long-distance medium and long-wave broadcast reception is possible only because of the existence of an electrified region high in the earth's atmosphere. This region, electrified by nature, is called the ionosphere. It is the ionosphere, acting somewhat like a mirror, that reflects radio signals over great distances.

The ionosphere is believed to be caused, at least in part, by ultraviolet radiation given off by the sun. The amount of radiation illuminating the ionosphere varies hourly, seasonally and geographically, depending upon the relationship between the sun and the earth. Reception is usually better on the higher frequency bands (15, 17, 21 and 25Mc) when the sun is more directly overhead or closer to the earth, for example, during the daylight hours, during the winter season, and in tropical or southern regions. Reception in the lower frequency bands (3.9, 6, 7, 9 and 11Mc) is usually better when the sun is lower in the sky, or further from the earth, for example, during the hours of darkness, and in temperate and northern geographical areas.

In addition to hourly, seasonal and geographical changes in reception conditions, there is a year-to-year change over an approximate 11-year cycle.

For reasons not yet fully understood by scientists, this 11-year cycle change appears to result from the difference in the number of sunspots appearing on the face of the sun. When the sun's surface is covered with a great number of spots, the ionosphere is electrically strong and long-distance radio reception is often at its best; when the number of sunspots diminishes, reception becomes poorer. During 1957-61, when the sunspot cycle was at or near its maximum, reception conditions were at their best. During the years 1963-66 there were few sunspots on the face of the sun and reception conditions were considerably poorer.

The present sunspot cycle began during October, 1964 and appears to have reached its peak during November, 1968 with a smoothed sunspot number of 111. Solar activity, therefore, declined during 1969, and is expected to continue to decline steadily, until the cycle ends, probably sometime during 1975.

During 1969, solar activity declined from a smoothed sunspot number of 109 to 97. During 1970 the cycle is expected to decline further, to reach a smoothed sunspot number of approximately 75 by the end of the year. This decline in solar activity is expected to result in some noticeable changes in shortwave reception. By comparison, reception during 1970 is expected to be somewhat below the peak conditions of 1968-1969, but similar to reception experienced during 1967.

The following is a general summary of reception conditions expected on each shortwave broadcasting band during 1970.

25 Mc band (11 Meters)

Less use will be made of this band as the solar cycle declines. During 1970, however, solar activity should still be high enough to permit excellent reception over very long distances during the fall, winter and early spring months. Long-distance reception should fall off during the late spring and summer months, but reception of stations a thousand or so miles away should improve. While somewhat fewer than during 1969, a large number of international broadcast stations are planning to schedule transmissions in the 11 meter band during 1970.

21 Mc band (13 Meters)

Reception of exceptionally strong signals over distances of many thousands of miles, from most areas of the world should be possible during the daylight hours, or when its daylight at one end of the path, and early evening at the other end. Peak reception conditions are expected from early fall through late spring. Long-distance reception is likely to fall off considerably during the summer months, but reception of stations between approximately 600 and 1,300 miles should improve during this season. Almost every international broadcast organization is planning to use this band during 1970, and a very high level of congestion is expected, especially during the winter season.

17 Mc band (16 Meters)

Excellent long-distance reception of stations from all areas of the world should be possible in this band throughout the year from shortly after dawn through the late afternoon and early evening hours. A very high degree of congestion is expected on this band during 1970.

15 Mc band (19 Meters)

During 1970, propagation conditions on this band are expected to continue to be excellent for the reception of both long- and medium-distance stations, from several hundred to several thousand miles away. The band is expected to be full of stations with exceptionally strong signals from shortly after sunrise, through the daylight areas, and into the evening. During the spring and summer months, excellent reception may also be possible during most of the night-time hours as well. Exceptionally long-distance reception is more likely to occur for a short period after sunrise, and again during the late afternoon and early evening hours. With favorable propagation conditions, and with so many stations planning to use this band during 1970, congestion is expected to be greater than in any of the other shortwave broadcasting bands.

11 Mc band (25 Meters)

This should be an excellent band for medium distance reception during the hours of daylight. During this period, at any season of the year, exceptionally strong signals should be possible from stations that are between 500 and 2,000 miles away. Long-distance reception from stations several thousand miles away should be possible for a short period at sunrise, and again during the late afternoon and early evening hours. During the summer months, both medium- and long-distance reception should also be possible during the hours of darkness. Relatively heavy congestion is expected in this band, especially during the late afternoon and early evening hours.

9 Mc band (31 Meters)

Excellent daytime reception over short- and medium-distances on the order of 400 to 1,500 miles should be possible throughout the year on this band. Fairly good long-distance reception over several thousand miles should also be possible from the early evening hours, through the hours of darkness, until shortly after sunrise from early spring through late fall. During the winter months, long distance reception is expected to deteriorate during the hours of darkness. A high level of congestion is expected on this band, especially during the early evening hours.

7 and 6 Mc bands (41 and 49 Meters)

Excellent short-range reception is expected on these bands during the daylight and early evening hours, for distances up to approximately 1,000 miles. During the fall, winter and early spring months, when static levels are low, fairly good medium- and long-distance reception should also be possible from shortly after sunset, through the hours of darkness and until shortly after sunrise. Higher static levels may make long-distance reception somewhat

SOLAR ACTIVITY IN 1970

by Prof. Dr. M. Waldmeier, Zurich.

Sunspot activity was at maximum level throughout 1968 and the first half of 1969. Since July 1969 the activity shows a substantial drop; therefore the maximum of solar activity is certainly over. For the year 1969 the following sunspot-relative-numbers are available up to now:

Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sep.
104	121	138	105	120	102	88	91	81

These numbers show strong fluctuations from month to month. This is especially true for cycles of low and medium activity. After a first peak in May 1968 an even higher peak occurred in March 1969. The smoothed maximum has to be fixed somewhere between these two peaks. As the time of the maximum is based on the smoothed relative-numbers, which are not yet available for 1969, only a provisional estimate can be given: this maximum will be around 1968.7 and the highest smoothed relative-number will amount to about 110. As on the average over all cycles observed hitherto the highest smoothed sunspot-relative-number amounts to 108, the present maximum is one of medium intensity. After the sunspot-minimum 1964 the yearly mean relative-numbers increased to 15 in 1965, to 47 in 1966, to 94 in 1967, and to 106 in 1968. The observed values are in close agreement with the predictions. In the report for "Solar Activity in 1967", written in September 1966, the maximum was predicted to occur 1968.5 and the highest smoothed relative-number to amount to 110.

Now as we are past the maximum further predictions will be even more reliable than on the ascending branch. The decrease of activity will be passing off somewhat more slowly than was the increase. For the year 1969 a mean relative-number of 100 can be expected. In the years to come the decrease of the smoothed monthly sunspot-relative-numbers should take place fairly regularly. In 1970 these numbers should drop from 90 at the beginning to 65 at the end. This decrease will continue up to 1975 when a new minimum of solar activity will be reached.

As in the past, the Swiss Shortwave Service will emit each month the daily sunspot-relative-numbers as well as predictions of the smoothed monthly sunspot numbers for six months ahead. Details for these transmissions are as follows:

English: Mon: 07.50 on 6165/9535/9590/11775kHz, 09.35 on 9665/11760kHz, 10.50 on 15305/17795/21520kHz, 12.20 on 9665/11865 kHz, 14.05 on 15305/17845/21520kHz, 15.50 on 15305/17830kHz, 19.05 on 15305/17795kHz, 20.20 on 6055/9665kHz; Tues: 02.20 on 6120/9535/11715kHz, 05.35 on 6120/9720kHz.

Spanish: Sat: 14.40 on 9665/11865kHz, 16.55 on 21540kHz, 22.10 on 6055/9665kHz; Sun: 01.10 on 9595/11720/15125kHz, 03.55 on 6120/9535/9720kHz.

Dates of transmission in 1970:

Mondays	Tuesdays	Saturdays	Sundays
Jan. 5	Jan. 6	Jan. 10	Jan. 11
Feb. 9	Feb. 10	Feb. 7	Feb. 8
Mar. 9	Mar. 10	Mar. 7	Mar. 8
Apr. 9	Apr. 7	Apr. 4	Apr. 5
May 4	May 5	May 9	May 10
June 8	June 9	June 6	June 7
July 6	July 7	July 4	July 5
Aug. 10	Aug. 11	Aug. 8	Aug. 9
Sept. 7	Sept. 8	Sept. 5	Sept. 6
Oct. 5	Oct. 6	Oct. 10	Oct. 11
Nov. 9	Nov. 10	Nov. 7	Nov. 8
Dec. 7	Dec. 8	Dec. 5	Dec. 6

(from page 54)

more difficult during the late spring and summer months. Always crowded, both bands are expected to be extremely congested during the evening and night time hours of the winter season.

4, 3, and 2 Mc bands (60, 90 and 120 Meters) These bands are used mainly for short-distance reception. During the hours of daylight, stations within a radius of a few hundred miles should be heard well. After sunset, and throughout the hours of darkness, the reception range should increase to at least several hundred miles, and for the more powerful stations, to a thousand miles or more. During the summer months, high static levels are likely to make reception in these bands difficult at times.

For more specific reception information, please refer to the Table of the Most Suitable Meter Bands for 1970 (see page 39).

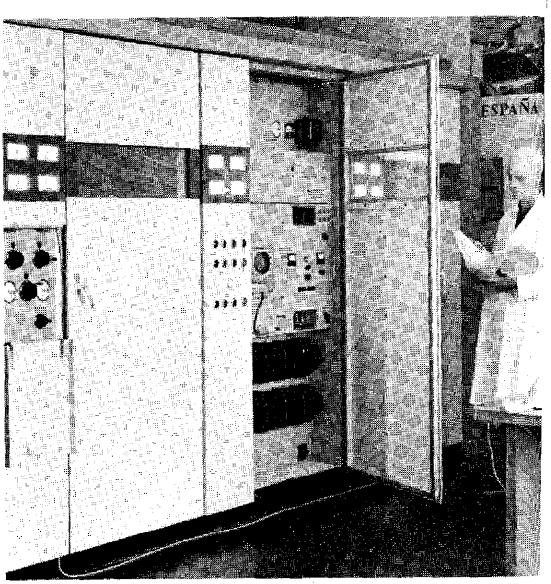
Philips' broadcasting stations
can be found all over the globe.
That is a well-known fact.
A chronological reference list
covers the years from 1921.
An alphabetical list however
shows some gaps.
We hope to fill these one day.

PHILIPS

What's lacking is the



Some broadcasting references

Abu Dhabi	Finland	Mauritius	Spain
Argentina	France	Mexico	Sudan
Australia	Guyana	Morocco	Surinam
Austria	Holland	Mozambique	Sweden
Belgium	India	Netherlands	Tanzania
Bolivia	Indonesia	Antilles	Thailand
Cambodja	Iraq	Nicaragua	Vatican State
Ceylon	Ireland	Norway	Venezuela
Chile	Italy	Pakistan	Western
Colombia	Laos	Peru	Germany
Denmark	Libya	Portugal	Zambia
Ecuador	Madeira	Rhodesia	

# of Qatar

What has never lacked is Quality. In all our products and all our services. Philips' reputation for design, reliability and after-sales service dates back to 1921 (the year in which our first broadcast went on the air).
Philips engineers survey, plan and install entire systems, whether it consists of a simple audio amplifier or a complete broadcasting network including studios. They did so from polar circle to equator. From Abu Dhabi up to Zambia.

PHILIPS

Philips' sound broadcasting programme includes:
- MW transmitters: 10-300 kW
- SW transmitters: 10-300 kW
- VHF FM transmitters: suitable for stereo operation
- aerial equipment
- studio equipment
- ancillaries

For more information, write to our local representative or to NV Philips' Telecommunicatie Industrie, P.O. Box 32, Hilversum, The Netherlands

Every month first-hand information on the world of broadcasting is offered to you in the

EBU REVIEW

Published in English and French by the European Broadcasting Union

Part A — Technical will keep you informed of all new technical developments in sound and television broadcasting.
—Articles written by specialists describe typical new installations, new operational methods and research work undertaken by the broadcasting organisations.
—The "International News" section is devoted to news items reported by EBU Members concerning the installation and operation of transmitting stations and studio centres, recording equipment and outside broadcasting facilities, both for sound and for television.
—Each number gives a summary of the changes that have taken place during the previous two months in the spectra of the long, medium and metric (FM) sound broadcasting wavebands and of the television wavebands.

Part B — General and Legal—brings you authoritative reports on radio and television developments throughout the world in the non-technical fields. Specialists write on the latest trends in

programming, administration, and planning.

activities are reported from the international sphere, and from broadcasting organizations in more than 60 countries.

experts analyse legislation and jurisprudence touching on broadcasting, new Copyright Acts, etc.,

special numbers give in-depth coverage of key subjects, including, satellite broadcasting, graphics and design, news programming, sport, religious programming, Eurovision developments, and educational broadcasting.

ANNUAL SUBSCRIPTION

Part A (six numbers): 230 Belgian francs. Publishers: EBU Technical Centre, 32 Avenue Albert Lancaster, Brussels, Belgium.
Part B (six numbers): 20 Swiss francs. Publishers: EBU Administrative Office, 1 rue de Varembé, CH-1211 Geneva 20, Switzerland.
A combined subscription to Parts A and B (12 numbers) may be ordered either from Brussels or Geneva (price 420 Belgian francs or 36 Swiss francs).

telecommunication journal

In the increasingly international age in which we live, it is more important than ever that everyone connected with radio should be in touch with authoritative world opinon on radio matters.
The Telecommunication Journal, the official organ of the International Telecommunication Union (ITU), serves just this purpose. Since 1869 (when it first appeared as the "Journal Télégraphique") it has faithfully covered all aspects of telecommunications which come within the purview of the world organization (now a UN specialized agency) set up in 1865 to regulate them.

The journal contains

- a news section covering the activities of the ITU, of its Member Administrations and of private operating companies and highlighting technical advances in radio throughout the world –
- a list of satellite launchings notified during the previous month –
- a section entitled "Ideas and Achievements" which coversthe major developments of telecommunications in the various Member Administrations –
- articles by world experts, with a heavy emphasis recently on the latest developments in space communications –
- a comprehensive list of articles of telecommunication interest appearing in the scientific press throughout the world –
- official ITU information, including lists of forthcoming ITU Conferences and other International telecommunication meetings –
- monthly sunspot predictions –
- "Telephilately" a section devoted to stamps with telecommunications as their subject –
- section giving details of invitations to tender released by the various Member Administrations concerning telecommunication installations.

It is published monthly by the ITU in separate English, French and Spanish editions.

It costs 2.5 Swiss francs a copy. The annual subscription is 25 francs for one language edition, 50 francs for two and 75 francs for three.

For further information, write to: Telecommunication Journal, ITU, Place des Nations, 1211 Geneva, Switzerland.

THE SATELLIT KEEPS YOU IN TOUCH WHEREVER YOU ARE!

Equipped with 20 wave ranges, the SATELLIT is the ideal communication receiver for radio amateurs, globetrotters, expedition leaders and yachting fans.

Its years-ahead technology and extraordinary ease of operation have made the SATELLIT one of world's most advanced radios.

In addition to FM, AM (MW) and a specially spread Long Wave band for marine wireless service, the new SATELLIT can offer 17 Shortwave ranges. SW 1 is equipped with electronic SW Fine Tuning and covers continuously the 60—187 m range. This means a tuning convenience that hitherto the "Satellit 208" only could provide on the SW range. Whether it's marine band signals, shipping broadcasts, meteorological or amateur broadcast — the SATELLIT provides matchless reception.

The SATELLIT's most remarkable feature is its Shortwave Tuner (a rotating drum selector). It gives continuous coverage of all wave lengths from 10—60 m, split into eight pre-spread sections. A shortwave band within each of these sections can be spread additionally over the entire scale length, simply by pressing the BANDSPREAD key.

SW 2: 60 ... 42 m + 49 m band
SW 3: 50 ... 36 m + 41 m band
SW 4: 37 ... 27 m + 31 m band
SW 5: 30 ... 22 m + 25 m band
SW 6: 23 ... 17 m + 19 m band
SW 7: 20 ... 14.5 m + 16 m band
SW 8: 16.5 ... 12 m + 13 m band
SW 9: 14 ... 10 m + 11 m band

Frequencies up to the AM band are covered by the SW band 1 from 60—187 m; tuning is by the main tuning scale.

The SATELLIT is available in two versions:

1. Black leatherette-covered wood cabinet, metallic front
2. Wood cabinet, imitated walnut finish

Dimensions: 17¼ x 10¼ x 5¼" approx.

Satellit Amateur 210
complete with SSB unit and built-in mains power pack. A special receiver with 12 wave ranges for radio amateurs. Spread amateur wavebands.
Tuning ranges: FM — 87 ... 108 MHz, SW 1 = 1.6 ... 5.0 MHz (187—60 m), AM (MW) = 510 ... 1620 KHz, LW = 145 ... 420 KHz. Even higher selectivity than the SATELLIT 210 due to ceramic filters in the AM/IF stages. Other features identical to Satellit 210.

SVERIGES RADIOKLUBB – SRK
(The Radioclub of Sweden)

- has served the DX-hobby since 1944
- issues the printed journal "DX-RADIO" 11 times per year
- publishes a unique short-wave log with time indication
- sends you information and a sample copy of DX-RADIO if you ask for it enclosing one IRC
- has the following address: Sveriges Radioklubb, Box 5083, S–102 42 Stockholm 5, Sweden
- is the club for newcomers as well as advanced DXers
- is the club for you

Annual membership fee: US $4.00, £1/8/0, DM 16.00, Sv.Kr. 20.00. Airmail supplement to USA $ 1.00.

THIS BOOM MICROPHONE IGNORES EVERYTHING ...EXCEPT THE DIALOGUE

Consistency of sound track quality on an endless variety of locations and sets can be dramatically improved with the remarkable Shure SM5 Boom Microphone. It "hears" the dialogue rather than the ever-changing character of the surroundings.

Because its cardioid directional pattern is uniquely uniform with frequency and symmetrical about its axis, the SM5 is singularly independent of the effects of environment. Even in extreme shooting situations (such as with tight sets, low ceilings, hard walls, low microphone angles, traffic or air conditioner noise and rumble, and changing distance) the SM5 minimizes sound coloration and ambient noise pickup. Equalization changes—on the set or in transfer—are seldom, if ever, necessary.

The highly effective attached windscreen completely encloses the two-stage mechanical filter, so that there are no external "rubber bands" for the wind to "strum." The absence of response-correcting inductors or impedance transformers assures freedom from hum.

Call on the Shure SM5 to solve your most annoying boom problems!

For additional information and technical data write today, to: Shure Brothers, Inc., Export Department, 222 Hartrey Ave., Evanston, Illinois 60204, U.S.A.

SHURE SM5

UNIDIRECTIONAL DYNAMIC BOOM MICROPHONE

SHURE PROFESSIONAL MICROPHONES . . . FOR BETTER AUDIO

MODEL SM56
CARDIOID DYNAMIC
Extremely versatile in studio, control room, and remote use. Also widely acclaimed for rhythm recording. Bright, clean sound. Exceptionally uniform cardioid pattern gives optimum control of environment.

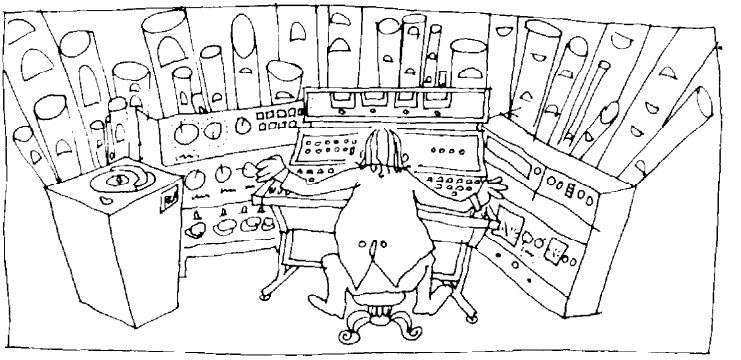
MODEL SM33
UNIDIRECTIONAL RIBBON
Warm, smooth sound for studio, control room, and scoring stage. Super-cardioid directional pattern. Compact, yet rugged.

MODEL SM76
¼" OMNIDIRECTIONAL DYNAMIC
Ideal for interviews and audience participation, yet unusually smooth wide range response (40-20 KC) for critical music reproduction. Instantly detachable from stand. Steel case with Cannon connector.

MODEL SM50
OMNIDIRECTIONAL DYNAMIC
Self-windscreened and pop-free for news, sports, remotes, and interviews. Also ideal for many studio and control room applications. Comfortably balanced for hand or stand use. Natural response.

AL 270

One-man audio band



The man from RCA.

See him for the best of everything in audio. You'll find out why so many broadcast stations, sports stadia and concert halls use RCA audio equipment.

For the best in automated tape centers, consider the RT-27. Records and plays back cartridges (from 40 seconds to 31 minutes). It eliminates cueing and tape threading—something else your disc jockeys don't have to worry about. And, it can be operated by remote control or used to automatically trigger other audio tape recorders. Or choose the RT-21 for your reel-to-reel requirements—with either CCIR or NAB equalization.

Need a new studio consolette? Ask the man about the BC-8A, a self-contained, solid-state hi-fi input system for AM, FM or TV dual-channel operation.

How about a compact monaural audio consolette? The solid-state BC-9A offers pushbutton control of all high-level sources, plug-in modules, built-in intercom and remote control facilities.

For a great new turntable, a modern microphone—for anything you need in audio—contact your local authorized RCA Distributor, or the RCA International Marketing subsidiary nearest you.

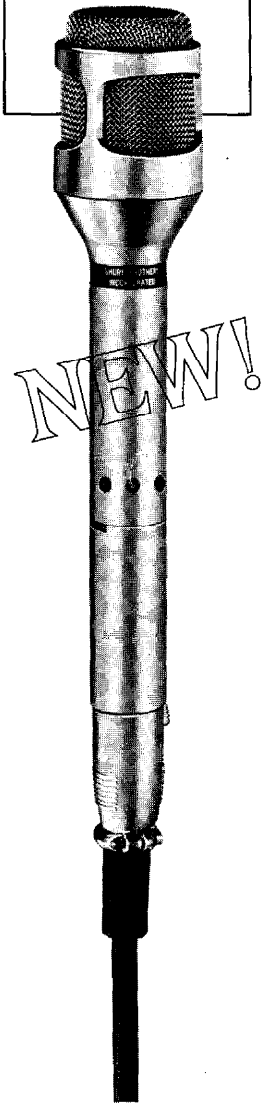
SHURE

SM53

UNIDIRECTIONAL DYNAMIC MICROPHONE



NEW!

one or all of these provable advantages can make this your most effective and reliable microphone!

1. WIDER FRONT WORKING ANGLE
The SM53 allows *greater freedom of performer movement—tonal quality is unaffected by movement throughout* the broad effective pickup area. *Eliminates "holes" and "hot spots"* when using multiple microphones. These valuable attributes stem from a broad, true cardioid frontal pattern *at all frequencies, in all planes*—freeing the user from the restrictions of overly tight angular sensitivity.

2. MORE EFFECTIVE REJECTION OF UNWANTED SOUNDS
The SM53 prevents sound coloration due to off-axis reflections or reverberation—and, in addition, unwanted sounds (even air conditioner rumble) are effectively controlled. These properties are achieved through the polar pattern which is singularly uniform with frequency (even at the extreme low end) and is symmetrical about its axis.

3. MECHANICAL NOISE ISOLATION
Built-in effective shock mount significantly reduces the objectionable stand, cable, and handling noises associated with many unidirectional microphones. The SM53 can be used in many applications where conventional units have proved marginal or unusable.

4. EXTRAORDINARY RUGGEDNESS
You can even drop the SM53 directly on its nose without damaging the microphone element—and it will maintain its excellent performance characteristics.

5. SUPERIOR HUM REJECTION
Built-in hum-rejection system reduces magnetic hum susceptibility by as much as 20 db compared to other units! Makes it far more usable in distant pickup applications and in areas with extremely high magnetic fields.

6. LESS SUSCEPTIBILITY TO "POP"
Integral "pop" filter minimizes explosive breath noise without external screening. Works well where other microphones are marginal or unusable.

7. MINIMIZED PROXIMITY EFFECT
Uniform tonal quality is maintained (without objectionable low-end build-up) regardless of whether the microphone is worked close up or from a distance.

8. FIELD SERVICEABILITY
Element (cartridge), connector, front screen, roll-off switch can all be replaced in minutes.

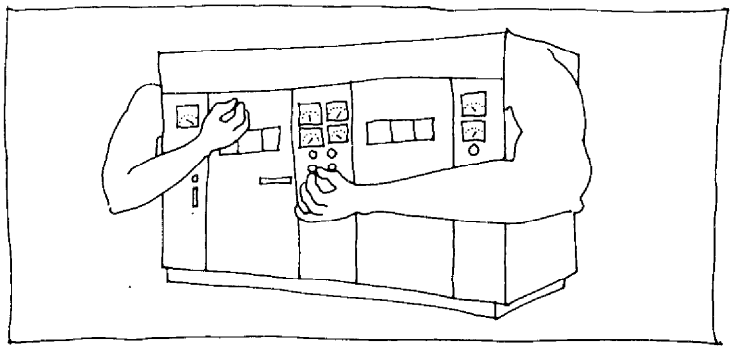
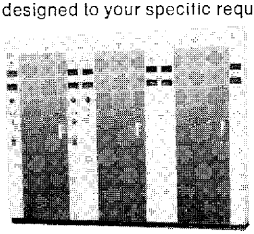
robot AM



RCA medium wave transmitters offer the save-an-engineer-for-studio-work plan.

It's a simple plan. When you're ready for a new medium wave solid-state transmitter, specify RCA. Every model —from 1-kW to 100-kW—has built-in provisions for *unattended* operation by remote control. They minimize the need for special transmitter personnel and allow you to locate your transmitter buildings outside of costly downtown areas. Every model is built to meet the rigid specifications that make unattended operation practical!

And that's only one reason to specify RCA AM. Consider built-in facilities for easy conversion to higher power. Consider engineering and manufacturing capabilities. Only RCA can provide you with everything you need to produce the finest medium wave signal possible. Transmitters, towers, antennas, audio components, tape recorders, automatic logging and automation components—complete systems made and matched by a single source... available from stock or designed to your specific requirements!



What's more, you'll save maintenance money with RCA AM transmitters. In the long run, the best costs less. For complete information, contact your local authorized RCA Distributor, or the nearest RCA International Marketing subsidiary.

RCA

MEXICO, D.F., MEXICO, RCA S.A. de C.V., 2519 Avenida Cuitlahuac
BUENOS AIRES, ARGENTINA, RCA International Ltd., Calle Paroissien 3960

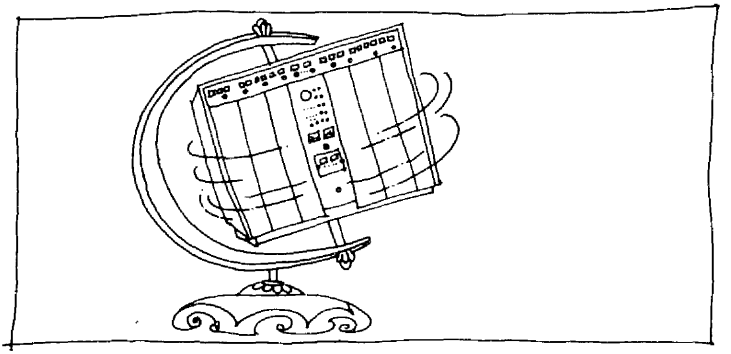
SUNBURY-on-THAMES, MIDDLESEX, ENGLAND, RCA Ltd., Lincoln Way, Windmill Road

non-stop VHF-TV



It costs less than the other kind.

Choose an RCA VHF-TV parallel transmitter—from 10-kW to 30-kW—and you'll find out why. You'll get two of the finest transmitters of their kind—completely independent, but working in parallel in a single space-saving unit. You'll be sure of continuous operation. And you'll save money. Here's why:

RCA "twin VHFs" cost less to buy (and run) than two separate transmitters of comparable power. You get a fail-safe system. Should one transmitter ever go off, the other one goes on—instantly, *automatically*. Power costs can be reduced as much as 25%, as compared to conventional transmitters; PA tube costs, as much as 30%. And you'll reduce maintenance costs due to faster troubleshooting, and a smaller spare parts inventory.

RCA non-stop VHF-TV. The best for less. For complete information, contact your local authorized RCA Distributor, or the nearest RCA International Marketing subsidiary.

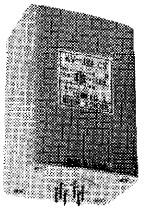
KV-Series Video Transformers

- Provide wide frequency band (flat up to 10MHz)
- Completely eliminate longitudinal current
- Have terminals hermetically sealed against weather

And a new advance—KV-124CS



has joined the series with the following specifications.
Frequency response: 20Hz~9MHz ±1.0db
Insertion loss: 0.35db at 15KHz
Max. level: 2.8V p-p input at 50Hz
Longitudinal current suppression: 70db or better at 15KHz, 50db or better at 1MHz
Impedance: Primary; 75Ω unbalanced, Secondary; 124Ω balanced

LISTENERS CLUB

You can join Radio Australia's Listeners Club—and receive the club badge and certificate—by: Providing 12 reception reports at a rate of two per month over a period of six months.

Numbering each report 1, 2, 3, etc., to 12 to assist us in keeping records.

Providing the following details in each report: name of programme, frequency, date, time, comment on reception quality, and type of receiver.

It is preferable, though not essential, to send these reports on Radio Australia reception report cards, which are available on application to: Radio Australia, Melbourne, Australia. Verification cards are sent for each correct reception report.

North America Edition: Sun 12.45 (VI), Mon. 01.10 (VI/VII). **DX-ers Calling:** Sat 21.30 (II/III/IV); Sun 04.30 (VIII), 07.30 (V), 13.00 (VI), 15.30 (I), Mon 02.15 (VI/VII) — **Stock Exchange Report:** Mon-Fri 08.00 (I/III/IV), 11.30 (II) — **Request Prgr's: Listeners' Choice:** Sun 11.10 (I/II/IV), Daily 14.30 (I). **Music By Request:** Daily 00.30 (I/IV) — **Wake Up With Williams:** Sun-Thurs 22.15 (I/II/IV) — **Calling Antarctica:** Fri 03.00, 04.00 and 09.15 — **Eight Bells:** Sun 08.30 (I/II/III/IV), Mon 04.15 (VIII), Thurs 12.30 (I/II) — **Colleagues' Choice:** Wed 05.45 (I/IV), Thurs 02.00 (VI/VII), 04.15 (VIII).

Listen to the world with Eddystone short-wave receivers

When you own an Eddystone Communications Receiver you have the broadcasting world at your finger-tips — wherever you happen to be — on land or at sea. The reputation these sets have attained is proof of their reliability and excellence and now you can visit a special Eddystone department at Imhofs and see, hear and compare all models working side by side on permanent demonstration.

We can arrange despatch to any part of the world the same day and in the U.K. delivery is free — backed by an after-sales service for which Imhofs is famous. Send today for full details.

Eddystone EB35 Mark II broadcast receiver AM/FM transistorised. A high performance all-band receiver can also be used as a 'Hi-Fi' tuner. Powered by 6 SP2 torch cells, or, with Type 924 power supply unit, from AC mains.

Eddystone 940 (13 valve) communications receiver. A connoisseur's instrument combining 'Professional' appearance with performance; has a world-wide reputation, two RF stages ensure high-sensitivity.

Eddystone EC10 transistorised communications receiver. An enthusiast's receiver at a modest price. Embodies features usually only found in much more expensive designs. Powered by 6 SP2 torch cells or Type 924 power unit (AC).

Eddystone EC10 Mark II transistorised communications receiver. A de-luxe version of this famous design now incorporating 'S' meter and limited fine tuner.

Eddystone EA12 'Ham Band' receiver. Built to professional standards but specifically for the amateur enthusiast. High sensitivity for all reception modes CW, MCW, AM, and SSB. FSK adaptor available as ancillary.

WORLD PUBLICATIONS

LINDORFSALLE 1, HELLERUP, DENMARK

WORLD RADIO BULLETIN

is published twice monthly in a new enlarged size. It contains concentrated information on the latest news from broadcasting and TV stations throughout the world, including complete schedules from major world stations, corrections to present schedules, information on new stations with indication of addresses, programs, etc., etc. Manuscripts are completed only a few days before printing which enables you to receive fresh and up-to-date information. The WORLD RADIO BULLETIN is thus the ideal aid to keep your radio manuals (f.inst. World Radio TV Handbook) complete and exact. A free sample copy is available on request.

Prices: ANNUALLY (26 bulletins): US $4.50, Da.Kr. 35.00. £1/16/0, DM 20.00 or equivalents, SIX MONTHS (13 bulletins): US $2.50 Da.Kr. 20.00, £1/0/0, DM 11.00 or equivalents.

POSTAGES, ANNUALLY, SEAMAIL: US $1,00, Da.Kr. 8.00, £0/8/0, DM 4.20 or equivalents.

POSTAGES, SIX MONTHS, SEAMAIL: US $0.50, Da.Kr 4.00, £0/4/0, DM 2.10 or equivalents.

POSTAGES, ANNUALLY, AIRMAIL: US $3.30, Da.Kr. 15.00. £0/16/0, DM 10.00 or equivalents.

POSTAGES, SIX MONTHS, AIRMAIL: US $1.15, Da.Kr. 7.50. £0/8/0, DM 5.00 or equivalents.

The complete prices will be: ANNUALLY, SEAMAIL: US $5.50, Da.Kr. 43.00 £2/4/0, DM 24.20 or equivalents. SIX MONTHS. SEAMAIL: US $3.00, Da.Kr. 24.00, £1/4/0, DM. 13.10 or equivalents.

MASTER OF THE SEVEN SEAS

The horizon has no limit for the Ocean-Boy. Even far-away signals from the other side of the ocean can be received clearly with this high-performance portable radio — on shortwave, of course.
This dependable receiver has been the dream of radio amateurs for years. Meanwhile the set has been further developed and improved.
The result: a seven-range portable with the most modern technical equipment. In addition to its legendary reception quality on shortwave, it is now offering top performance on FM also.

Just take a look at the ingenious FM panel: with 8 FM station buttons you can preselect any FM station on the corresponding scale. Automatic Frequency Control (= AFC) enables you to re-select any FM station with utmost accuracy — no matter how often the button is pressed.

Location of the most powerful and easiest-to-receive stations is greatly facilitated by an indicator device dependent on field intensity. With this indicator one can determine the best receiving position of the telescopic antenna as well.

7 tuning ranges: FM, 4 shortwave ranges (SW 1 = 62 . . . 187 m, SW 2 = 24 . . . 67 m, SW 3 = 15 . . . 25 m, SW 4 = 10 . . . 15.5 m), medium wave (= AM) and long wave. 21 circuits (8 AM + 13 FM). 20 transistors. 11 diodes + 6 stabilizers.
Cabinet: black or imitated walnut finish.
Dimensions: 16¼ x 9½ x 5¼" approx.
GRUNDIG Werke GmbH, 851 Fürth/Germany

GRUNDIG

HOKUSHIN AUTOMATIC 16-mm FILM PROJECTOR for Color and Monochrome Television

Japan Broadcasting Corp. (NHK) uses HOKUSHIN projectors only, color and monochrome. Commercial stations too use them. Because HOKUSHIN projectors are not just automatic: they are TV-style automatic in every detail. Available for both NTSC and European systems.

Select HOKUSHIN and select right.

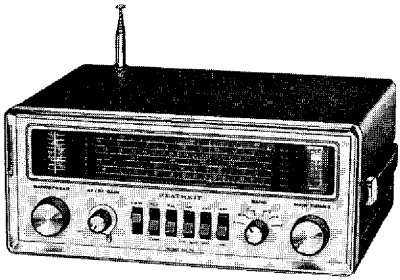
Model TC-510D

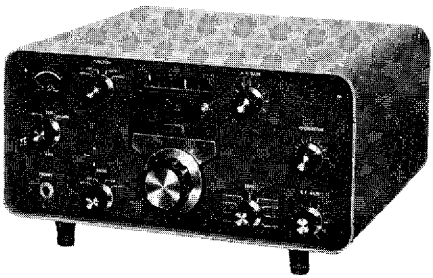
Heathkit® Shortwave...Your Doorway To The World



GR-78 6-Band General Coverage Receiver

• Receives from 190 kHz to 30 MHz in 6 bands • All solid-state design • Highly stable • Excellent Sensitivity • 4 ceramic filters in IF give sharp selectivity & eliminate IF alignment • Built-in 500 kHz calibrator • Bandspread tuning • Signal strength meter • Switchable AVC • Switch-selected AM, CW & SSB tuning • Receive/Standby switch and Receiver Muting for use with transmitters • External antenna and headphone jacks • Operates from built-in rechargeable nickel-cadmium battery with built-in charger

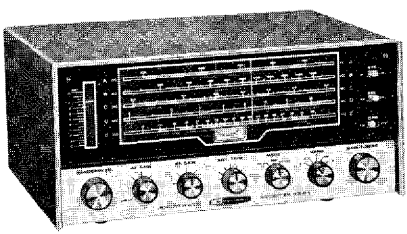
Kit GR-78, 14 lbs..... **$129.95***



SB-310 Professional 10-Band Receiver

• Covers 49, 41, 31, 25, 19 & 16 M shortwave broadcast bands, 80, 40 & 20 M amateur bands, 11 meter CB • Built-in 5 kHz crystal filter for sharp selectivity • Built-in 100 kHz crystal calibrator • Prebuilt & aligned Linear Master Oscillator with 1 kHz dial calibration for perfect tuning characteristics • ANL • Headphone jack • Separate RF & AF gain controls • Calibrated "S" meter

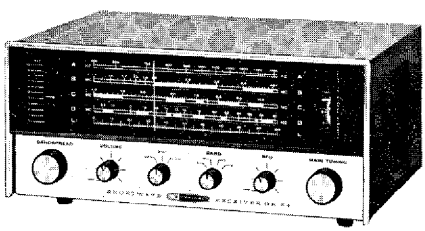
Kit SB-310, 24 lbs..... **$259.95***



GR-54 Deluxe 5-Band Shortwave Receiver

• 3 shortwave bands cover 2-30 MHz plus 180 kHz to 420 kHz aeronautical & radio navigation band plus AM broadcast • Tuned RF stage for greater sensitivity • Crystal filter for excellent selectivity • Receives AM, CW, LSB & USB • "S" meter • Bandspread tuning • ANL, AVC & antenna trimmer controls • Headphone jack • Includes long wire antenna

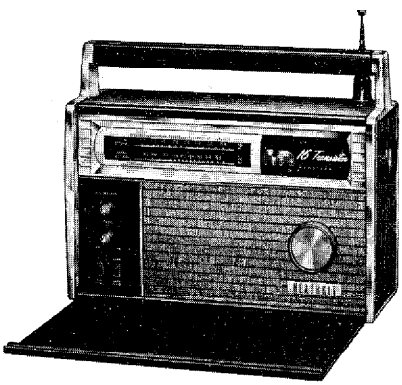
Kit GR-54, 25 lbs..... **$89.95***



GR-64 Low Cost 4-Band Receiver

• Covers 550 kHz to 30 MHz — includes AM broadcast plus 3 shortwave bands • Bandspread tuning • Built-in relative signal strength meter • Variable BFO for tuning SSB & CW signals • Built-in switchable Automatic Noise Limiter • Q-Multiplier and external antenna inputs • Built-in AM rod antenna • Headphone jack • Simple circuit board construction for 8-10 hour assembly

Kit GR-64, 15 lbs..... **$42.50***



GR-43A 10-Band AM-FM-Shortwave Portable

• Tunes 150-400 kHz Longwave, AM Broadcast, FM and seven shortwave bands from 2—22.5 MHz • All solid-state design for maximum reliability and long life • 44 factory assembled and aligned circuits for excellent performance and easier assembly • Two built-in antennas for superb performance on all bands • Completely portable . . . runs on seven flashlight batteries (not supplied) or accessory converter/charger • Battery-saver switch cuts power drain up to 35% • 4x6" speaker for console sound • Comes complete with earphone • Time zone maps and "listener's guide" included • Fast, enjoyable assembly with the famous Heathkit manual

Kit GR-43A, 19 lbs..... **$149.95***

FREE 1970 CATALOG! Describes these and over 300 other kits for home & hobby. Write now for your FREE copy: Heath Company, Dept. 165, Benton Harbor, Michigan 49022.

An Invitation

in a unique and unusual organization, the Radio New York Worldwide Listeners Club, your membership entitles you to the following . . .

■ The Bulletin, issued bi-monthly, contains the most complete information and news on international communications, technical data and electronic news. Some outstanding articles already featured include: The Last Broadside, a report on Britain's pirate stations, Life in the Year 2000, an exciting look into the future, and Machines that Think, a lesson in automation and computer technology. The Bulletin also presents guest editorials, shortwave listening tips, plus a complimentary correspondence service for all members.

■ Every member receives an 8 and ½ inch impressive gold membership certificate and special wallet-sized membership card.

■ All members receive advance Radio New York Worldwide (WNYW) frequency and program information.

If you'd like to join for one year all you need do is send $1.00 (US) or its equivalent in any currency (check, money order, ten International Reply Coupons — available at your local post office or, in the United Kingdom, domestic money orders in the amount of 8/4d and crossed), *(if you live in the United States, send $2.00 for a one year membership)*, to:

AMERICAN FORCES RADIO AND TELEVISION SCE.

ADDR: Deputy for American Forces Radio and Television Office of Information for the American Forces, ASD (M + RA), Washington, D.C. 20305 — **L.P:** Dir: John C. Broger. This office exercises over-all policy control of the American Forces Radio and Television Service (AFRTS). The missions of AFRTS is to keep US service-men informed on current events. All broadcasts are in English. News, sports and other timely information is beamed overseas by shortwave tr's on the US Atlantic and Pacific coasts and a relay tr. in the Philippines. These sw-tr's serve the overseas stations and ships at sea which relay them locally. Programs other than news and locally produced programs are derived directly from the US Commercial radio and TV networks. These programs are transcribed or kinecoped and shipped to the overseas stations by the American Forces Radio and Television Service, Los Angeles, California. **L.P:** Officer-in-Charge: Col. Robert Cranston, USA.

WORLDWIDE SERVICE (from Washington D.C.)

ADDR: American Forces Radio and Television Service, Washington, 1117 North 19th Street, Arlington, Virginia 22209 — **L.P:** Chief, L.T.C: Harry R. Bangs. Chief Engineer: Enrico Bove.

GILFER ASSOCIATES, Inc.

Proudly Announces Publication of:

SHORTWAVE VOICES OF THE WORLD

By Richard E. Wood

The exciting and revealing story of international shortwave broadcasting. Written by a world-renown listener, this book tells the inside story with words and pictures. Many suggestions on when to listen, how to obtain reception report verifications, how to identify stations by language and/or slogan, etc. Lavish illustrations.

$3.95, postpaid

We stock all callbooks, frequency lists, SWL antennas, logging material, receivers, maps, band surveys, clocks, and text books of interest to any shortwave listener.

D.Prgr. in English (to So. Europe, Near East, Mediterranean and No. Africa): 17.00-20.00 on 17720kHz, 20.02-22.00 on 11795kHz. **N. in English:** 17.01 (Mon-Fri), 20.03 (exc. Sun).
ANN: "You are listening to World International Broadcasters, R. Station, WINB, broadc. from Red Lion, Pennsylvania, United States of America, on a freq. of . . . megacycles, with transmitting power of 50.000 watts" — V. by QSL-card and prgr. schedule. Reports wanted — WINB is a comm.st. which purpose is to promote the God of the Bible and country.

NATIONAL ASSOCIATION OF BROADCASTERS
ADDR: 1771 N. Street N.W, Washington, D.C. 20036.
Purpose: The purpose of the Association is to foster and promote the development of the arts of aural and visual broadc. in all its forms to protect its members in every lawful and proper manner from injustices; to do all things necessary and proper to encourage customs and practices which will strengthen and maintain the broadc. industry to the end that it may best serve the public.

L.P: Chmn: Grover C. Cobb. Press: V. T. Wasilewski. Vice-Pres, Radio: Charlie Stone. Secr. Treasurer: E. E. Revercomb.

COMMERCIAL STATIONS

A new format for radio was born during the past years in the United States — progressive rock. More than two dozen FM radio stations in the U.S. and Canada are now featuring a progressive rock format. The format involves a combination of songs either with meaningful lyrics (this includes folk songs) and records featuring the progressive music of groups like the Cream, the Doors, Beatles. This type of format is the hottest thing in the States and many AM radio stations are now including one or more hours top 40 of progressive rock in their regular schedule; many AM radio stations are playing some progressive rock records along with their regular records, especially as the records become so popular. Through progressive rock formats, FM stations in general are beginning for the first time to make an impact in audience rating surveys. Within the United States, the power of a radio station is often not as important to listeners as its programming. In most major cities, radio stations concentrate their programming to appeal to a given segment of the population and there's a type of programming available to appeal to almost every listening taste. There are stations that devote their entire broadcast day to news, others that devote their time to talk programs. In most cities, the station with the largest listening audience is that station which aims its programming to teenagers and young adults — primarily the people who buy single 45 rpm records. These are mostly rock'n'roll records and the stations base their programming on Billboard Magazine's Hot 100 Chart, which lists the top-selling single 45 rpm records in the nation. Other radio stations program music to appeal to young adults and adults and their music is selected from Billboard's top 40 Easy Listening Chart. These "good music" stations usually have the major part of the radio listening audience during morning and early afternoon listening hours before teenagers get out of school.
There are also radio stations that program nothing but country music, others that program Latin American music, others that feature rhythm and blues (aimed primarily at Negro listeners), many that program religious services and religious music, a few that feature mostly jazz, a few that program "background" — or soft relaxing — music, and a good many that program nothing but classical music.

NEW YORK 10022 USA

La Emisora Internacional Privada de Nueva York

In many cases, the signal of a radio station is directional, meaning that reception is better in the direction the station is aiming its signal.
Most radio stations, because of the better broadcast conditions cut down their power at night.
Because many radio stations are limited to daytime operation only on AM, a large number of these stations round out a broadcast schedule through an affiliated FM radio station.
Following is a list of MW stations operating with 10kW power or more. Not only is the address of the station provided, but its principal official, its operational hours (local time), but where the station is known for one type of programming, the kind of programming available on the station.
NB: Clear channel st's are listed in bold types.

NATIONAL ASSOCIATION OF FM BROADCASTERS

ADDR: 665 Fifth Ave, New York, N.Y. — L.P: Chmn. of the Board: Joseph D. Coons. Pres: Abe Voron. Sec: Edward S. Kenehan. Adm. Dir: Karen Layland. Vice Pres: John L. Richer. Treasurer: Morton Marks.
PURPOSE: To promote the development of FM radio. A group of independent FM broadcasters formed the NAFMB to deal with the special problems of the FM broadcast industry. NAFMB has been involved in projects related to the following concerns of the FM industry: support for the Federal Communication Commission's separate programming policy for combined AM and FM operations; launched campaign for car radios; set in motion "all-channel" legislation which would require that all radio sets sold in the U.S. be capable of FM reception. These are merely a few of the efforts being initiated under strong leadership and the active interest of NAFMB members. The NAFMB offers continuing services of research, program information, promotion, engineering, management and F.C.C. liaison specifically related to the FM industry.
FM is making strides and for the first time is being accepted as "commercial radio" by advertisers. FM offers an extensive variety of programming formats; it's a mass medium for everyone. There have also been strides in stereo and 788 FM stations in the U.S. currently broadcast in stereo.

EDUCATIONAL ORGANIZATIONS

Department of Health, Education and Welfare, Office of Education, Washington, D.C. 20202; Office of the Under Secretary: I. A. Nestingen.
The Educational Television Facilities Programme designed to encourage establishment of new and improved broadcast facilities through financial grants based on matching funds.
Office of Education, Media Research and Dissemination Branch, Ag. Dir: Th. D. Clemens. Educ. Media Specialist: Mrs. G. Broderick, provides a variety of services by professional staff specialists to schools and college officials, st. operators, and others, as requested. Under Title VII of the National Defense Education Act, finances research and experimentation in the educ. uses of all media; disseminates information on the subject through conferences, seminars, workshops, and publication of pertinent bulletins.

NATIONAL ASSOCIATION OF EDUCATIONAL BROADCASTERS (NAEB)

Headquarters: 1346 Connecticut Ave, Washington, D.C. 20036. Te: (202)667-6000 — L.P: Pres: W. G. Harley; Asst. to Pres: James A. Fellows; Exec. Dir. of TV: Chalmers Marquis; Exec. Dir. of Radio: Gerrold Sandler.
Formed in 1925 as the Association of College and University Broadcasting Stations, the National Association of Educational Broadcasters today includes four divisions — the Educational TV Stations, National Education Radio, Instructional Division (through which the NAEB serves universities, colleges, schools and educational organizations which operate licensed or closed circuit stations) and the Individual Member Division (which serves the professional career needs of those in educational broadcasting). Since 1950, the NER division has operated a tape network, supplying member st's with programming material not only from member's but also from domestic and foreign producers like the BBC, the CBC, the RAI, Radio Nederland, Radio Belgium and the French Broadcasting System. The ETS division operates the ETS Program System, The Indiana University, to make available outstanding locally-produced programs on a nationwide basis. This service, together with that of National Educational TV, an independent organization primarily responsible for production and distribution of cultural and public affairs, programmes, provides educational TV station with programming. The ETS division also published a monthly newsletter for ETV station managers—The ETS News. There are now 163 radio st. members, 134 TV st. members. In addition, the NAEB has 2400 individual members. According to FCC regulations, non-comm. educational FM st's have no restrictions on transmission time.

THE NORTH-AMERICAN BROADCASTING CORPORATION

Who Needs Us?

You'd be surprised. The **Radio New York Worldwide Listeners Club,** the official listeners organization of Radio Station WNYW, can make international radio even more exciting than it already is.

How? Simple. When you join the Club, you receive an impressive membership certificate, and are entitled to specially-designed Club report forms as well as other Club offers. But most important, each member receives a unique publication . . . The **Radio Worldwide** magazine . . . every two months. Each issue of the Club magazine is jam-packed with what you want to read and know about in the world of communications. Each issue contains valuable information such as DX tips, news of radio and electronics, technical data, and communications news features. In the past, we've had such feature stories as "Communications on the Moon" and "Television and the Space Race", with more to come.

Interested? If you live outside the United States, joining us is as easy as sending the equivalent of one dollar ($US) in the currency of your country. If you like, send us that amount in International Reply Coupons, check, money order or domestic money order (in the United Kingdom, value equivalent to $1.00 is 8/4d and crossed). If you live in the United States, and wish to join, send $2.00 for a one year membership. That will entitle you to be a member of the **Listeners Club.** Then maybe you'll see why so many international listeners know what's happening.

We can do a lot for you . . . you can do a lot for yourself.

What are you waiting for?

Write to the Club today . . . The **Radio Worldwide Listeners Club,** New York 10022, USA

The Listeners Club WNYW
Dept. 102
• 485 Madison Avenue
New York 10022, USA

Name_____

Address_____

News Dir: Michael R. Caffee. Prgr. Dir: R. K. Rand. (NABC — Public Radio).

Headquarters: Jackson Bldg, 1929 Irving St, San Francisco, Calif. 94122. Te: 731-6630. (Transcription Sce, Telefilm Distribution Center & Netw. at above address). L.P: Chmn. of Board of Dir's: Allan Bruce Erickson. Departmental Heads: Gen. Mgr. (Radio): Michael K. Erickson. Transcription Sce: Cathy Myers. Engineering: Ron V. Pelt. TV-Department: James E. Hunt. International Relations: Sandy Harris.

Stations: 463 educational organzations owning and operating a total of 806 st's (radio) and 43 st's (television), such st's being full members of the NABC. Plus 217 st's (radio) operated commercially which relay programs from NABC on a sustaining (non-commercial) basis. Such st's have Associate Membership.

Fi: By Membership Fees. Also support from outside sources for special projects.

Activities & Functions: The NABC operates both a network and a Transcription Sce, which duplicates, via tape and distributes to member stations seven hours of programming per week (average). NABC maintains close relations with many international broadcasters and participates actively in program exchanges, news projects and cultural affairs. Several overseas broadcasters release programs through the NABC and these include the NZBC and ORTF. NABC is a Charter Corporate Member of the I.B.S.

Policy: It is the policy of the NABC to promote international goodwill, cultural exchanges and better programming in the public interest and in the interest of international understanding. The NABC is independent politically and financially from any government and endeavours to present a fair, impartial and objective viewpoint on world issues. Its programming policies attract new listeners because of balanced content, creating cultural interest where none existed before. Its long-term plans include the establishment of a Production/Announcing and General Training Center for personnel, a Drama Repertory Company, Symphony, Concert and Light Music Orchestras (House Orchestras) and overseas offices and studios.

Regional Centers: Northfield, Minnesota (Mgr: P. Peterson); Delaware, Ohio (Mgr: Gaukel); Provo, Utah (Mgr: Lee Stott); New York, N.Y. (Mgr: Dr. H. Chesnais); Pacifica, California (Mgr: Dr. W. R. Cleaves).

Overseas Prgr. Exchange Sce: P.O. Box 94122, San Francisco. Head: Mr. T. R. Fischer.

Official Publication: NABC JOURNAL is distributed to all Radio and TV st's in USA and Canada free of charge. NABC JOURNAL serves to inform stations of activities within public broadcasting in the USA, on new technical products and various NABC activities. (Color, 68 pages. Issued Monthly) — **Publisher:** Teragram Prodns, P.O. Box 1408, Los Altos, California 94022.

GOVERNMENT AGENCY:
THE FEDERAL COMMUNICATIONS COMMISSION (FCC)

the licensing agency for broadc. st's.

ADDR: 1919 "M" Street N.W, Washington, D.C. 20554. **L.P:** (key officials): Chmn: Rosel Hyde, Exec. Dir: M. D. Paglin. Secr: B. F. Waple. Chief, Broadcast Bureau: G. S. Smith. The FCC is an independent Federal agency, composed of seven Commissioners appointed by the Pres. by and with the advice and consent of the Senate. One of its major activities is the general regulation of broadc, now visual as well as aural. This regulation may be divided into three phases: 1) The allocation of spectrum space to the different types of broadcast services, 2) Considerations to build and operate individual stations, 3) Regulating their operation.

Call letters: International agreement provides for the identification of the radio st. by the first letter or first two letters of its assigned call signal, and for this purpose apportions the alphabet among different nations. USA st's use the initial letters KN and W, exclusively, and part of the A series. Broadcast st's are assigned call letters beginning with K or W. Generally speaking, those beginning with K are assigned to st's west of the Missisippi River and in the territories and possession, while W is assigned to broadcast st's east of the Missisippi.

Number of broadcasting st's as of **May 1st, 1969:**

	Authorised	Operating
AM	4309	4216
FM Commercial	2149	1982
FM Education	407	367
TV Commercial (UHF)	334	1721
TV Commercial (VHF)	520	506
TV Educational (UHF)	112	100
TV Educational (VHF)	77	76
TV Translators (UHF)	801	686
TV Translators (VHF)	1762	1579

UNITED NATIONS

UNITED NATIONS RADIO

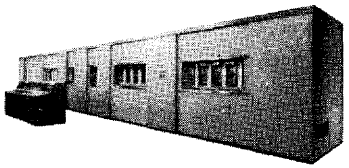
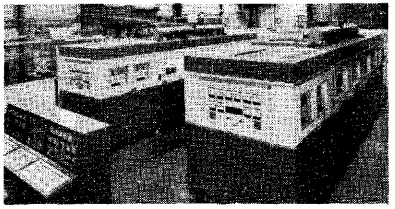
Continental Electronics



1,000,000 WATT AM MF TRANSMITTER
Continental designed and built the first super-power transmitter for the Voice of America. Delivering 1,000,000 watts of continuous power to the antenna, it was installed at Munich in 1953. Similar Continental 1,000,000 watt broadcast transmitters are installed in Okinawa, the Philippines, Thailand, Central America and Egypt.



1,000,000 WATT AM MF TRANSMITTER
Continental's newest 1,000,000 watt transmitter during construction, factory test early in 1968.

RECORD SOURCE INTERNATIONAL SPANS THE GLOBE...

a universal service uniquely designed for every programming need, now in its tenth year.

RSI provides the best programming material available. All new American releases, singles and albums, are listened to and evaluated by the knowledgeable review panel of Billboard Magazine, the world's leading business newsweekly for the music-record-tape industry.

The best programming music is selected for the RSI services including both singles (weekly) and albums (monthly) each available on a regular subscription basis.

RSI is the central source for new American record product (by all artists in all categories from all labels) serving the musical needs of over 6,000 radio stations in 45 countries.

Give your listening audience the benefits of this tasteful, exciting sound exposure.

ALL BAND SHORT WAVE

HQ-200

COMMUNICATIONS RECEIVER

Continuously tuneable from 540 kHz to 30 MHz with no gaps - "Q-Multiplier" for better interference rejection - SSB-AM-CW reception - Variable selectivity - 100 Hz to 12 kHz - Sensitivity better than 0.5 microvolt for 10db S+N/N ratio - Zener regulated Hi Frequency oscillator - Antenna peaker - "S" Meter - Multi-stage AVC - Separate electronic bandspread - Noise limiter.

Price $249.95

Size 16 1/2" wide; 8" high; 9" deep

Weight 22 lbs.

Accessories:

S-101 Speaker $19.95

Crystal Calibrator $15.95

Specifications of other HAMMARLUND S.W.L. receivers are yours for the asking.

Live and Direct from USA

. . . the commentaries of Walter Cronkite, Mike Wallace, Lowell Thomas, Eric Sevareid and Quincy Howe are broadcast by WNYW to millions of short wave radio listeners in Europe, Africa and the Americas. We are WNYW, the privately-owned commercial short wave station in the U. S. A. and the international affiliate of the CBS Radio Network. Each day we beam CBS News, stock market reports, news interviews, news documentaries and the best in American music to the world.

Tune us in. You can receive WNYW almost anywhere on any radio with short wave coverage, even inexpensive portables. We broadcast in the 13, 16, 19 and 25 meter (21, 17, 15 and 11 megahertz) short wave bands from 1700 to 0230 GMT.

Write for our free program schedule.

INTERNATIONAL WATERS

RADIO VERONICA (Comm.)
ADDR: P.O. Box 218, Hilversum, Holland. Studio: Zeedijk 27A, Hilversum. **Te:** 02950.
STATION: M/V "Veronica" anchored 6 miles west off "S. Gravenhage" (The Hague): 1562kHz 8kW.
D.PRGR: 05.00 (Sat/Sun 06.00)-24.00 (Fri/Sat 01.00). **Spanish** 20.00-20.30, **Italian** Sat 21.00-21.30, **Greek** Sun 20.30-21.00, **Indonesian** Thurs 19.00-20.00, **Papiamento** Thurs 20.00-21.00. Other times in Dutch — **N,Wrp.** 07.00-17.00 one min. before every h — **ANN:** "Dit is R. Veronica op 192 meter" or "R. Veronica, Het station waar muziek in zit" — **V.** by QSL-card.

RADIO HAURAKI (Comm.)
ADDR: P.O. Box 1480, Auckland, New Zealand — **Station:** M/V "Tiri" anchored in the Hauraki Gulf: 1480kHz 2kW — **D.Prgr:** 17.00-13.00. **N:** On the h. **V.** by QSL-card.

VERENIGING HOSPITAAL KERKSCHIP "DE HOOP"
ADDR: Damrak 95, Amsterdam C. **Te:** 24 44 43. **L.P:** Mgr: P. Broeksma. Chief Radio Operator: H. L. J. Distel (on board).
HOSPITAL-CHURCHVESSEL "DE HOOP": Call: PHKS. 2182kHz, 2201kHz, 2316kHz (all 0.3kW).
D.PRGR: Wrp. in Dutch (audience 15.000 Dutch fishermen and coaster crews): 09.15-09.25 on 2201kHz, 09.30-09.40 on 2316kHz, 15.15-15.25 on 2201kHz; **Assembly ships Wrp:** 05.45-05.55, 11.45-11.55, 17.45-17.55 on 2201kHz. **Church Services in Dutch:** Sun 09.30-11.30, 17.45-18.30; Wed 18.30-19.00 on 2316kHz.
The Hospital-Church vessel leaves the Netherlands 12 times a year to serve the fishing-vessels, and the above mentioned prgr's will be broadcast when the ship is at sea — **V.** by QSL-card Rp. Reports appreciated.
Beside the scheduled times on which "De Hoop" is listening on the Dutch Fishery frequencies, continuously watch is kept on the international calling frequency of Radio-telephony: 2182kHz.

Foreign ships may call on the above mentioned frequency in one of the following languages: English, German, French and Dutch. Apart from medical aid, assistance can be rendered in engine trouble, defective radio, equipment and electronic navigation instruments.

RADIO NORDSEE INTERNATIONAL (Comm.)
ADDR: Adm, Techn. Management and Studio: Mebo Ltd, Telecommunication, Albiesriederstrasse 315 (or P.O. Box 113), 8047 Zürich, Switzerland. **Te:** 54 24 47. **Telex:** 55503.
STATION: Radio Ship M/S "MEBO" anchored 15 miles north of Belgium: 1605kHz 186.9m — 6210kHz 48.31m — 9940kHz 30.18m — **FM:** 102MHz.
D.PRGR'S (incl. religious prgr's) in German, English and French: 05.00-23.00 (Fri/Sat 24.00).
INT-SIG: "Man of action" — **V.** by QSL-card.

Listeners to Radio Australia in various countries sometimes send in pictures of themselves. This one came from Djakarta.

This is a first

STEREO INTERNATIONAL is the international magazine of stereo equipment.

Whether you're a beginner or a pro, Stereo International tells you everything you need to know about buying and caring for turntables and changers, loudspeakers, tuners, amplifiers, receivers and tape recorders; and where to place them for best listening pleasure. In addition, outstanding critics provide frank reviews of records and tapes to help you make the best selections for your collection.

STEREO INTERNATIONAL is the first publication of its kind. It is written in German and English for international distribution. The German edition is available at leading newsstands in Germany, Switzerland, Holland and Austria. The English edition is available at newsstands throughout Europe.

Pick up a copy today — **STEREO INTERNATIONAL** — the Consumer's Guide to Stereo Equipment.

WORLD TELEVISION

CHARACTERISTICS OF TELEVISION SYSTEMS

(As indicated in C.C.I.R. Report 308, Xth Plenary Assembly, Geneva, 1963)

System	Number of lines	Channel width MHz	Vision bandwidth MHz	Vision sound separation MHz	Vestigial side-band MHz	Vision modulation	Sound modulation
A	405	5	3	−3.5	0.75	Pos	AM
B	625	7	5	+5.5	0.75	Nég	FM
C	625	7	5	+5.5	0.75	Pos	AM
D	625	8	6	+6.5	0.75	Nég	FM
E	819	14	10	±11.15	2	Pos	AM
F	819	7	5	+5.5	0.75	Pos	AM
G	625	8	5	+5.5	0.75	Nég	FM
H	625	8	5	+5.5	1.25	Nég	FM
I	625	8	5.5	+6	1.25	Nég	FM
K	625	8	6	+6.5	0.75	Nég	FM
K1	625	4	6	+6.5	1.25	Nég	FM
L	625	8	6	+6.5	1.25	Pos	AM
M	525	6	4.2	+4.5	0.75	Nég	FM
N	625	6	4.2	+4.5	0.75	Nég	FM

For all stations except those working on system M, which has a field repetition frequency of 60 per second, the field repetition frequency is 50 per second.

United States of America: System M 525 lines.

Television on VHF/UHF (Band IV/V) Europe & Africa. VHF/UHF television systems for Band IV/V adopted by the European Broadcasting Conference Stockholm 1961 and by the African Broadcasting Conference, Geneva 1963 are 625-lines systems only. These can be grouped into 5 categories, here called Standards G to L:

Standard	Video Band-width (MHz)	Picture/ Sound Separation (MHz)	Vestigial Sideband (MHz)	Picture modulation	Sound modulation	Frequency of chromi-nance subcarrier (MHz)	Power ratio picture/ sound
G	5	5.5	0.75	Neg	FM	4.43	5:1
H	5	5.5	1.25	Neg	FM	4.43	5:1
I	5.5	6	1.25	Neg	FM	4.43	5:1
K	6	6.5	0.75	Neg	FM	4.43	5:1
L	6	6.5	1.25	Pos	AM	4.43	8:1

32	559.25	45	663.25	57	759.25	69	855.25
33	567.25						

The sound carrier frequency for each channel can be determined by adding the appropriate figure to the vision carrier frequency given above (5.5Mc for systems G, H; 6Mc for system I and 6.5Mc for systems K, L). In We. Germany ch38 is reserved for aero-navigation.

UHF Channels: USA.

Marconi television cameras

Marconi pioneering in camera design has resulted in the production of a range of fine cameras, which have achieved outstanding success throughout the world. More than 2000 live broadcast camera chains have been sold to 50 countries.

Mark V 4½ inch image orthicon camera Type B3100

Marconi pioneered the use of the 4½in image orthicon camera, the standard by which all other black-and-white cameras have come to be judged, and have sold nearly 1500, considerably more than any other manufacturer. The Mark V is the latest in the line of Marconi 4½ inch image orthicon cameras.
All solid state
Tilting highbrightness viewfinder
Servo or manual controlled integral zoom lens
Rigid stability

Mark VI photoconductive camera Type B3124

The Marconi Mark VI, designed to work with either vidicon or Plumbicon* can be used as a high-quality studio or outside broadcast camera, a manually or remotely controlled news and continuity camera, or a telecine camera.
High sensitivity
Excellent signal-to-noise ratio
All solid state
Lightweight modular construction

Mark VII 4-tube colour camera Type B3205

The Mark VII was the first successful four-Plumbicon* colour television camera in the world. It has earned a high reputation for excellent picture quality and high stability.
High stability
Outstanding sensitivity
Separate luminance
Brilliant optics
Compact and lightweight

The equipment, the know-how and the people to solve your colour TV problems.

The **EMI** Colour Camera Type 2001 is a world beater — already in use in three continents. In the U.K. alone over 200 have been ordered by the BBC and the programme contractors of the Independent Television Authority.

Behind the success of the Type 2001 Camera are many novel features, including the capstan arrangement of the unique **EMI** printed circuit scan assemblies and the built-in zoom lens, which contribute to the compactness, balance and stability of the Camera.

This camera has set new standards of colour registration, resolution and reliability.

Ease of operation is another outstanding feature of the Type 2001. zoom positions can be pre-set and selected by push-button control.

*Contact **EMI** for details of everything needed for colour studio installation and outside broadcast vehicles.*

RIKSFORBUNDET DX-ALLIANSEN (Swedish DX-Federation) P.O. Box 3108, S—103 62 *Stockholm 3* Sweden.

Riksförbundet DX-Alliansen bildades 1969 efter sammanslagning av DX-Alliansen och Sveriges DX-Förbund, för att samla alla svenska DX-klubbar och organisera DX-arbetet. Till klubbarna skickas regelbundet information och tips för mötesverksamheten och om framsteg på DX-området. ETER-AKTUELLT är vår medlemstidning, som utkommer 11 ggr/år med artiklar, lyssnartips, nyheter, teknisk information, byggsida m.m. Prenumerationskostnaden är 19:50år. Eter-Aktuellt prenumererar Ni på via: Eter-Aktuellt, Box 19008, 200 73 Malmö.

RIKSFORBUNDET DX-Alliansen (Swedish DX-Federation) is the controlling organization for the Swedish DX-Clubs. Eter-Aktuellt is our magazine in Swedish, and for DX-ers abroad we bi-monthly send RDXA Newsletter together with "Sweden Calling DX-ers bulletin" published by Radio Sweden.
RDXA also arrange the DX-Parliament, the biggest DX-meeting in Europe, with participants from several radiostations, radio industry and from most of the clubs. You are most welcome to take part in the 1970 DX-Parliament.
And don't forget our DX-badge, a multi-coloured badge to be worn on the jacket. It has one star for every 25 countries up to 100. For higher scores (125, 150, 175) it has a silver wreath. Applications should include a list of all verified countries certified by two persons. The price for the badge (25—100) 7 Sv.Kr. (10 IRCs), higher score 14 Sv.Kr (20 IRCs).

THE EUROPEAN DX COUNCIL

is an international organization founded in 1967 in Copenhagen to establish a closer cooperation between the European DX clubs. Any European DX club having more than 20 members and being willing to participate in the activities in the Council is entitled to membership with voting rights.
The European DX Council publishes a monthly *Newsletter* containing valuable information to DX clubs, discussions on questions of current interest, decisions and recommendations made by the *Council,* a first class news bulletin etc.

The aims of the Council are
- to promote cooperation and goodwill between European DX-listeners and between European DX-organizations,
- to achieve common objectives in the field of DX-ing,
- to stay in close contact with other DX-organizations throughout the world
- to improve contacts between DX-listeners and radio stations

All European DX clubs are invited to join the Council
The *Newsletter* can be subscribed by non-members, too.

For details write to:
Secretary General, European DX Council, P.O. Box 14110, Helsinki 14, Finland.

THE

Summer Supplement

(available June 1970)

updates all data which appears in this edition of the WRTH, including a listing of all new radio and TV-stations.

Price: D.Kr. 18.00
DM 9.00
£ 1-0-0
or U.S.$ 2.50

Additional copies of the WRTH, the Summer Supplement 1970 and "How to Listen to the World" 1969/70 can be obtained from:

Solilijevej 44
2650 Hvidovre
Denmark

7 Carnaby Street,
London, W1V 1PG,
England

165 West 46th Street,
New York 10036, N.Y.,

NORTH AMERICA (incl Mexico)

compiled by the National Radio Club, USA

Explanation of listing:—
FIRST COLUMN — Call letters and location are required identification for U.S. and Canadian st's. each half hour. Symbols in front of the call letters are as follows: *Construction Permit for new station, not yet on air. †Construction permit for move to this frequency from a different frequency. In parenthesis, frequency and/or power changes will be designated by two symbols — CP, Construction Permit, and PO, Presently Operating.
SECOND COLUMN — In addition to the standard abbreviations for U.S. and Mexican states, and Canadian provinces, certain geographical city and town names have been abbreviated. These include: Bch., — Beach; Cd. — Ciudad; Cy. — City; E. — East; Ft. — Fort; Hts. — Heights; Mt. — Mount; Mtn. — Mountain; No. — North; Pk. — Park; So. — South; Spgs. — Springs; St. — Saint; Ty. — Territory; and W. — West.
FOURTH COLUMN — Contains authorized operating hours and directional antenna information. The symbols mean as follows: D is daytime operation (between local sunrise and local sunset), D1 without directional antenna, D3 with directional antenna. (Under a new ruling of the F.C.C. certain daytime st's can operate between 0600 local time and sunrise when it is later than 0600 with reduced power); L is limited time, and means a st. West of the dominant st. can operate from as early as sunrise at the dominant st's location; A st. east of the dominant st. can operate as late as the dominant st's. sunset. Number indicates directional pattern as under "U" below. SH equals "Specified Hours" and usually means a st. that would normally operate unlimited time files a schedule of reduced hours with the FCC because of economic reasons. ST means "Shares Time". This usually finds a college, university, or church st. on the air two or three hours a day, during which time the commercial st. signs off. U means the st. is authorized to operate any time up to 24 hours a day. U1 means without directional antenna; U2 means with directional antenna at night; U3 means directional antenna, same pattern, day and night; U4 means directional antenna, different pattern day and night; U5 means directional antenna daytime, non-directional at night. Two Canadian st. are listed N, night only. The operators of these st's have st's. on other frequencies which operate daytime only: 710/730; 710/1230kHz.
